CHAPTER 6
CONCLUSION

Based on the experiment the result of the project are:

1. Concerto Platform successfully installed on Ubuntu Operating System. Concerto Platform use PHP and R as backend processing and MySQL as Database Management System. Concerto Platform successfully installed on the server so it ready to use as online test.
2. Concerto Platform can be use to create online psychotest system. It also can be implement as online system so the candidates employees can follow psychotest using computer and the company. The candidates employee that following psycotest also can see the result directly after finishing the test. Based on the explanation the candidates and company simplified by Concerto Platform to speed up recruitment process.
3. Concerto platform can be run to create online test. The online test can also be implement as many different varieties for example linear test, questionare and computer addaptive test. This research use computer addaptive test feature on Concerto Platform to create online psycotest that run on the server.
