ABSTRACT

Open EMR is an open source application that works on Medical Records application. It has a database for Hospital, Doctors, Patients, and Front offices.

This project implements a hospital name MedicaUnika, twenty Doctors, fifty Patients, and six Administration Staffs. Start from inputting all people in charge at this Hospital and setup the servicing schedule. This project then runs fifty Patients on checking up by Doctors, receiving Receipts from Doctors, getting drugs, and paying the bills.

By using this application, the Doctor and Administration staff will get a beneficial from different access right. By using this application the implementation of medical record will be much more effective and efficient.

Keywords: *OpenEMR , Diagnose, Medical Record.*

PREFACE

This project report title “Medical Record Using OpenEMR” will explain the process from the beginning to the end of this project. First Chapter , the writer describes introduction of this project such as background, scope, and objectives to be achieved. Second Chapter, the writer describes the literature which relevant to the problem that ocured, method and also the result from the study. Third Chapter,the writer describes the explain steps to resolve the research problem. Fourth Chapter, the writer make a contain about analysis consist of explanation the problem to be solved the research. Then the result can be displayed on diagram and narrative. Fifth Chapter in this project, the writer describes an implementation and testing the program. In the implementation, there be installation system. At the end of this project , the writer make a conclusion. Although this project has been running properly and smooth, this project still need further development.
