Lampiran 1. Perhitungan Isolat Protein Daun Yakon

❖ Hasil isolasi protein daun yakon

- Berat sampel awal

Ulangan 1 = 0,8 gram

Ulangan 2 = 0,8 gram

Ulangan 3 = 0,8 gram

Rata-rata berat sampel awal = $(0,8+0,8+0,8)/3=0,8$ gram

- Berat isolat protein

Ulangan 1 = $0,023 + 0,029 + 0,013 + 0,017 = 0,082$ gram

Ulangan 2 = $0,025 + 0,022 + 0,019 + 0,021 = 0,087$ gram

Ulangan 3 = $0,025 + 0,019 + 0,023 + 0,017 = 0,084$ gram

Rata-rata berat isolat protein = $(0,082+0,087+0,084)/3=0,084$ gram

- Efisiensi isolat protein kering

Ulangan 1 = $(0,082/0,8) \times 100\% = 10,25\%$

Ulangan 2 = $(0,087/0,8) \times 100\% = 10,875\%$

Ulangan 3 = $(0,084/0,8) \times 100\% = 10,5\%$

Rata-rata efisiensi isolat protein = $(10,25+10,875+10,5)/3= 10,542\%$

❖ Perhitungan penambahan protein daun yakon

Penambahan isolat protein menggunakan asumsi berat badan maksimal tikus pada saat pemilihan adalah 150 gram. Setiap hari masing-masing tikus akan diberi perlakuan dengan disonde sorbet pisang sebanyak 3,5ml. Selain itu asumsi 150 gram buah adalah 150ml dan penambahan air dalam sorbet adalah 50 ml, sehingga pembuatan sorbet akan menghasilkan 200ml sorbet pisang.

- Penambahan isolat protein daun yakon 25 mg/kg BB (perlakuan SP+IP25Y)

$$\text{Isolat yang ditambah} = \frac{25\text{mg}}{1000\text{ gram}} \times 150\text{gram} \times \frac{200\text{ml}}{3,5\text{ml}} = 0,214\text{gram}$$

- Penambahan isolat protein daun yakon 25 mg/kg BB (perlakuan SP+IP25Y)

$$\text{Isolat yang ditambah} = \frac{50\text{mg}}{1000\text{ gram}} \times 150\text{gram} \times \frac{200\text{ml}}{3,5\text{ml}} = 0,429\text{gram}$$

Lampiran 2. Perhitungan analisis proksimat sorbet pisang

Analisis proksimat yang dilakukan adalah pengukuran kadar air, kadar abu, kadar lemak, kadar protein, dan kadar karbohidrat dengan pengujian sebanyak 2 batch percobaan dengan 3 kali ulagan.

Lampiran 6. Dokumentasi Penelitian

❖ Isolasi Protein Daun Yakon

❖ Pembuatan Sorbet Pisang

Pemilihan Tikus Uji

Tikus yang akan diuji dipilih menurut berat badan yang memenuhi kriteria uji dan dipisahkan dengan tikus yang lainnya.

Induksi Streptozotocin

Tikus diinduksi secara intraperitoneal menggunakan STZ

Perlakuan Sonde

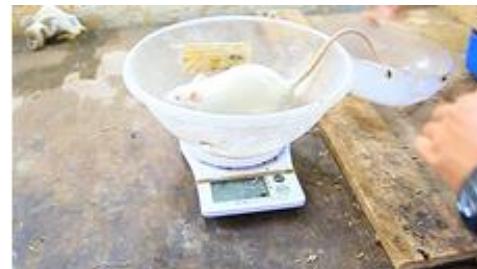

Tikus diberi perlakuan dengan disonde sonde sorbet pisang

Pengukuran Kadar Gula darah

Tikus dilukai ekornya untuk diambil darahnya dan diukur kadar gula darahnya menggunakan glukometer “easytouch”

Pengukuran Berat Badan

Tikus uji diukur berat badannya dengan menggunakan timbangan

Kondisi Kandang Tikus

Kondisi ketika dilakukan perawatan harian di kandang tikus

Rak-rak yang berisi tikus uji
