CHAPTER VI
CONCLUSION

6.1 Conclusion
The conclusion of this project:

1. Genetic Algorithm can be used to find real polynomial roots.

2. If the configuration number is below the recommended number (Population 100, Generation 10), the final result will not found.

6.2 Further Research
This program still have some problem. Program can not draw the graph neatly, the number is too close to each other. The GA process still can be improved and can be done faster.
