CHAPTER VI

CONCLUSION

6.1 Conclusion

The development of computer technology now internet can be enjoyed by the majority of the population dani, including Indonesia. The term e-commerce with its market as a one of the means that are created for Internet users can be used as a virtual marketplace online trading. In this study, has been made an example of Web sites using PHP where the end can interact with the pages of the website interaktif. Papua information system cultural potential, has easiness in the community, especially for those who are very busy in her daily work. Because all the information can be done from the front of the PC at home without having to Papua. From the overall results of this writing, it can be concluded that the PHP or Personal Home Page is now better known as Hypertext Pre Processor can be used as an option to create a web site that supports the development of Internet technology. PHP makes it easy for web programmers to develop and make the page look good information can be interactive. PHP can be used to support the system at large. This is because PHP allows accessing the database online. On this website there is one database that consists of 6 tables of the database is propyl, counties, tribes, languages, art and traditional foods.

6.2 Suggestion

Website Creation Potential of Cultural Papua system is simple because many facilities have not been implemented. During the creation of this website. At this writing can not display the amount of information found on the web. To the authors next to the readers who read the author is so pleased give Scientific Information System website Papuan cultural potential of this simple to make it more attractive.
