CHAPTER V

IMPLEMENTATION AND TESTING

5.1 Implementation Program

This implementation is done so that users of the website's information system can understand how to work on the project website this system. Here is the implementation of the project website information systems Papuan cultural potential

Coding database with a file name dbpapua.sql

This database consists of coding, database tribal language arts district profiles and typical food of Papua. The first database table create profiles consist of name, image, date of birth place, campus, mobile and Email.

```
drop database if exists dbpapua;
create database dbpapua;
use dbpapua;
create table propil
(
    name varchar(255),
    foto varchar(255),
    ttl varchar(255),
    kampus varchar(255),
    telepon varchar(20),
    Email varchar(255)
);
insert into profil values
('Mailes,Dani,Wenda','mailes.jpg','02-05
1991','UNIKA','082133390400','dhanyenambere123@gmail
.com    ');
create table district
```

```
(
no int primary key,
district  varchar(255) UNIQUE,
Central government varchar(255),
        regent varchar(255),
        districts  int,
        kelurahan int,
        logo varchar(255)
);
        insert into kabupaten values
        (1,'tolikara','karubaga','usman
        genongga',36,86,'KABUPATEN_wps1EA8.tmp.png'
        ),
        (2,'lani                          jaya','tiomneri','befa
        jigibalom',86,66,'KABUPATEN_wps125F.tmp.png'),
        (3,'jayawijaya','wamena','Ones
        pahabol',46,89,'KABUPATEN_wps208A.tmp_0000.
        png'),
        (4,'puncak                        papua','ilaga','wilem
        wandik',36,86,'KABUPATEN_wps7101.tmp.jpg'),
        (5,'mimika','timika','klementina
        muis',36,86,'KABUPATEN_wpsB53D.tmp.png');
        create table language
        (
                no int primary key,
                language varchar(255) UNIQUE,
                area varchar (255)
        );
        insert into bahasa values
        (1,'Bahasa Kwerba Mamberamo ','mamberamo'),
        (2,'Bahasa Abinomn, Foya, Foja','Jayapura'),
```

```
        (3,'Bahasa Abun','Karon Pantai'),
        (4,'Bahasa Aghu, Dyair','merauke'),
        (5,'Bahasa Aikwakai, Tori,Aikwakai-Tori, Sikari,
Ati, Eritai,      Araikurioko','Manokwari'),
        (6,'Bahasa,uruwai,Asienara,Karufa,
 Madidwana','fakfak'),
        (7,'Bahasa Dani, Ndani, Murip di lingkup
Jayawijay)
 (8,'Bahasa Dani Lembah Atas','Jayawijaya'),
        (9,'Bahasa Duvle, Duve, Duvele, Wiri ','paniai'),
        (10,'Bahasa Kaugat, Autohwaim','merauke');
        create table suku
        (
                no int primary key,
                suku varchar(255) UNIQUE
        );
                insert into suku values
                (1,'Suku Aero'),
                (2,'Suku damal'),
                (3,'Suku kamoro'),
                (4,'Suku Amungme'),
                (5,'Suku Mee'),
                (6,'Suku Paniai'),
                (7,'Suku jali'),
                (8,'Suku dani'),
                (9,'suku ndugama'),
                (10,'Suku Airo Sumaghaghe');
        create table seni
        (
        judul varchar(255),
        keterangan text,
```

```
gambar varchar(255)
);
        insert into seni values
        ('tari    wayase','memperdayakan    seni    budaya
        papua','papua biak.jpg'),
        ('tari                                    wisisi
        papua','aiara..iwaeo,aiyasaiwaeooo','SENI    DAN
        TARI_wps407A.tmp.png');
        create table makanan
        (
            makanan varchar(255),
            keterangan text,
            gambar varchar(255)
        );
        insert into makanan values
        ('ubi    jalar','memperdayakan    seni    budaya
        papua','ubi-jalar.jpg'),
        ('tari    wisisi    papua','aiara',iwaeo    aiyasa
        iwaeo','ubi-jalar.jpg');
```

1. Script to display the main menu with the name of the file index.php.

This script to display all of the data or the main page of the web project which consists of a main menu page profile, counties, tribes, languages, art and traditional foods. Within these pages the author uses <body style="background-color:D3D3D3"> the title in it there is also the title of the information system of Papua and cultural potential use strong letter.

```
<HTML>
     <head>
              <title>Front page</title>
                       <body style="background-color:D3D3D3">
</style></head>
<body>
//     The command to display the profile web Menu tribal district
language arts and food
<h1 align="center"><strong>The information system of cultural potential
of Papua</strong></h1> <p align="center">||
     <a href="/TA">Home</a>||
     <a href="Profil.php">Profil<a/> ||
     <a href="Kabupaten.php">Kabupaten<a/> ||
     <a href="Bahasa.php">Bahasa<a/> ||
     <a href="Suku.php">Suku<a/> ||
     <a href="Seni.php">Seni<a/> ||
       <a href="Makanan Khas.php">Makanan Khas<a/> || <br>
</p>
<p     align="center"   >   <img     src="HOME_wpsF317.tmp.png"
width="1012" height="357"></p>
<p align="center"><strong>PAPUA.</strong></p>
<p align="center">Papua is a province of Indonesia located widest in the
central part of New Guinea or the most eastern part of Western Papua
(formerly Irian Jaya). The eastern parts of the country of Papua New
Guinea. Papua Province first covers the whole territory of Papua western
portion, but since 2003 is divided into two provinces to the east
 </br>
<body>
<html/p>
```

2. Script to display the profile with the file name Profile.php

```php
<html>
    <head>
            <title>profil</title>
                    <body style="background-color:FFE4C4">
</head>
<body>
<div align="right"><a href ="/TA">Back</a></div>
<?php
//  function linking code with phpmyadmin
$conn = mysql_connect("localhost","root","123456");
if (!$conn) die ("Koneksi Gagal");
mysql_select_db("dbpapua",$conn) or die ("Database not found");
//  Mysql function to display all the Data Profile
$result = mysql_query("SELECT * FROM propil");
while($row = mysql_fetch_array($result)){
?>
// command to display the profile
   <h1 align="left">Profil</h1>
   <p   align="left"><img   src="<?php   echo   $row["foto"];   ?>"
width="258" height="248"></p>
   <p align="left">Nama    :<?php echo $row["nama"]; ?></p>
   <p align="left">Ttl        :<?php echo $row["ttl"]; ?></p>
   <p align="left">Kampus       :<?php                echo
$row["kampus"]; ?></p>
   <p align="left">Tlepn    :<?php echo $row["telepon"]; ?></p>
   <p align="left">Email    :<?php echo $row["Email"]; ?></p>
   <a             href="propil_edit.php?id=<?php           echo
$row["propil"];  ?>">Edit</a>  ||  <a  href="propil_delete.php?id=<?php
echo $row["propil"]; ?>">Delete</a>
```

```
<?php
</body>
</html>
```

3. Script to display the profile with the file name Profil.php

This script to show the profile web creation and included a photo, name, date of birth place, campus, telepone, and Email address. And use
```
<body style="background-color:D3D3D3">
```
// HTML coding to show the title Background profile and return to the Main Menu.
```
<html>
<head>
        <title>profil</title>
        <body style="background-color:FFE4C4">
</head>
<body>
<div align="right"><a href ="/TA">Back</a></div>
<?php
```
// Function linking code with phpMyAdmin
```
$conn = mysql_connect("localhost","root","123456");
if (!$conn) die ("Koneksi Gagal");
mysql_select_db("dbpapua",$conn) or die ("Database not found");
```
// Mysql function to display all the Data Profile
```
$result = mysql_query("SELECT * FROM propil");
while($row = mysql_fetch_array($result)){
?>
<h1 align="left">Profil</h1>
 <p align="left"><img src="<?php echo $row["foto"]; ?>" width="258" height="248"></p>
```

```
<p align="left">Nama     :<?php echo $row["nama"]; ?></p>
<p align="left">Ttl       :<?php echo $row["ttl"]; ?></p>
<p align="left">Kampus  :<?php echo $row["kampus"]; ?></p>
<p align="left">Tlepn     :<?php echo $row["telepon"]; ?></p>
<p align="left">Email     :<?php echo $row["Email"]; ?></p>
<a href="propil_edit.php?id=<?php echo $row["propil"]; ?>">Edit</a>
|| <a href="propil_delete.php?id=<?php echo
$row["propil"]; ?>">Delete</a>
<?php
}
</body>
</html>
```

4. Script to display a list of file names districts Districts with php

```
<html>
    <head>
            <title>profil</title>
                    <body style="background-color:FFE4C4">
</head>
<body>
<div align="right"><a href ="/TA">Back</a></div>
<?php
// Function linking code with phpMyAdmin
$conn = mysql_connect("localhost","root","123456");
if (!$conn) die ("Koneksi Gagal");
mysql_select_db("dbpapua",$conn) or die ("Database not found");
// Mysql function to display all the Data Profile.
$result = mysql_query("SELECT * FROM propil");
while($row = mysql_fetch_array($result)){
```

```
?>
   <h1 align="left">Profil</h1>
   <p   align="left"><img   src="<?php   echo   $row["foto"];   ?>"
width="258" height="248"></p>
   <p align="left">Nama   :<?php echo $row["nama"]; ?></p>
   <p align="left">Ttl      :<?php echo $row["ttl"]; ?></p>
   <p align="left">Kampus         :<?php                    echo
$row["kampus"]; ?></p>
   <p align="left">Tlepn   :<?php echo $row["telepon"]; ?></p>
   <p align="left">Email   :<?php echo $row["Email"]; ?></p>
   <a            href="propil_edit.php?id=<?php            echo
$row["propil"]; ?>">Edit</a>  ||  <a  href="propil_delete.php?id=<?php
echo $row["propil"]; ?>">Delete</a>
   <?php
   }
   </body>
   </html>
```

5. This script to display all district data with each table column

              // HTML command is to set up a form pag

```
<html>
       <head>
              <title>Kabupaten</title>
                     <body style="background-color:FFE4C4">
</head>
<body>
<div align="right"><a href ="/TA">Back</a></div>
<h1 align="left">List of regencies in Papua Province</h1>

  <td><?php echo $row["kelurahan"]; ?></td>
  <td><p  align="center"  ><img  width="50"  height="61"
src="<?php echo $row["logo"]; ?>" ></p></td>
  <td><a        href="Kabupaten_edit.php?id=<?php        echo
$row["no"];              ?>">Edit</a>              ||              <a
```

```
href="Kabupaten_delete.php?id=<?phpecho
$row["no"]; ?>">Delete</a></td>
    </tr>
<?php}
mysql_close();?>
    </table>
  <p>The above is a list of districts in Papua province</p>
   <body>
        <?php
        if(isset($_GET['status'])) {
               echo "Data Sudah ada.";
        }
        ?>
    <form method="post" action="Kabupaten_tambah.php">
      <table>
        <tr><td>NO</td><td><input                 type="no"
name="no"></td></tr>
        <tr><td>Kabupaten/Kota</td><td><input    type="text"
name="kabupaten"></td></tr>
              <tr><td>Pusat        Pemerintahan</td><td><input
type="text" name="pusat_pemerintahan"></td></tr>
        <tr><td>Bupati/Wali  kota</td><td><input  type="text"
name="bupati"></td></tr>
        <tr><td>distrik</td><td><input              type="no"
name="distrik"></td></tr>
              <tr><td>kelurahan/kampung</td><td><input
type="no" name="kelurahan"></td></tr>
              <tr><td>Logo</td><td><input           type="text"
name="logo"></td></tr>
          <tr><td       colspan="1"><button      type="submit"
value="simpan">SIMPAN</button></td></tr>
```

```
        </table>
      </form>
    </body>
  </div>
</body>
</html>
```

6. Added php script District

```php
<?php
if(isset($_POST['no'])) {
  // linking code with phpMyAdmin
      $conn = mysql_connect("localhost","root","");
      if (!$conn) die ("Koneksi Gagal");
mysql_select_db("dbpapua",$conn) or die ("Database not found");
 // this is coding Mysql to add the District Data
      $result      =      mysql_query("INSERT      INTO      kabupaten
VALUES(".$_POST['no']." ,'".$_POST['kabupaten']."' ,'".$_POST['pusat_pemerin
tahan']."'         ,'".$_POST['bupati']."'         ,         ".$_POST['distrik']."         ,
".$_POST['kelurahan']." ,'".$_POST['logo']."')");
// Function to check whether the data Language successfully saved or
not
  if($result == TRUE) {
              header('location:Kabupaten.php');
      } else {
              header('location:Kabupaten.php?status=data_ada');
      }
}
?>
```

7. Php script edit District.

```
<html>
<head>
<title>Kabupaten</title>
</head>
<body>
<divalign="right"><a href="kabupaten.php">Back</a></div>
<?php
//  Function linking code with phpMyAdmin
$conn = mysql_connect("localhost","root","123456");
if (!$conn) die ("Koneksi Gagal");
mysql_select_db("dbpapua",$conn) or die ("Database not found ");
//  Mysql function to display the data Districts have No
$result = mysql_query("SELECT * FROM kabupaten where no = ".$_GET['id']);
$row = mysql_fetch_array($result);
?>
// This script commands to edit the data districts
<form method="post" action="Kabupaten_update.php">
<table>
<input type="hidden" name="no" value="<?php echo $row['no']; ?>">
<tr><td>Kabupaten/Kota</td><td><input      type="text"      name="kabupaten"
value="<?php echo $row['kabupaten']; ?>"></td></tr>
<tr><td>Pusat               Pemerintahan</td><td><input                type="text"
name="pusat_pemerintahan"                value="<?php                echo
$row['pusat_pemerintahan']; ?>"></td></tr>
<tr><td>Bupati/Wali    kota</td><td><input    type="text"    name="bupati"
value="<?php echo $row['bupati']; ?>"></td></tr>
<tr><td>distrik</td><td><input  type="number"  name="distrik"  value="<?php
```

```
echo $row['distrik']; ?>"></td></tr>
<tr><td>kelurahan/kampung</td><td><input type="number" name="kelurahan"
value="<?php echo $row['kelurahan']; ?>"></td></tr>
<tr><td>Logo</td><td><input type="text" name="logo" value="<?php echo
$row['logo']; ?>"></td></tr>
 <tr><td                   colspan="1"><button                   type="submit"
value="simpan">SIMPAN</button></td></tr>
</table>
</form>
</body>
</html>
```

8. Php script updates District

```php
<?php
if(isset($_POST['no'])) {
   // Function linking code with phpMyAdmin
       $conn = mysql_connect("localhost","root","123456");
       if (!$conn) die ("Koneksi Gagal");
mysql_select_db("dbpapua",$conn) or die ("Database not found");
   // Mysql function to replace the District Data
       $result = mysql_query("UPDATE kabupaten SET kabupaten =
'".$_POST['kabupaten']."',            pusat_pemerintahan            =
'".$_POST['pusat_pemerintahan']."', bupati = '".$_POST['bupati']."', distrik
= ".$_POST['distrik'].", kelurahan = ".$_POST['kelurahan'].", logo =
'".$_POST['logo']."' WHERE no = ".$_POST['no']."");
// Function to check whether the data Language successfully saved or not
       if($result == TRUE) {
               header('location:Kabupaten.php');
       } else {
               header('location:Kabupaten.php?status=data_ada');
       }
}
```

```
?>
```

9. Regency delete php script

```php
<?php
//  Function linking code with phpMyAdmin
$conn = mysql_connect("localhost","root","123456");
if (!$conn) die ("Koneksi Gagal");
mysql_select_db("dbpapua",$conn) or die ("Database not found");
//  command to delete the data districts
$result = mysql_query("DELETE from kabupaten WHERE no = ".$_GET['id']);
header('location:Kabupaten.php');
?>
```

10. Script to display the list of languages with the language file php

```html
<html>
    <head>
            <title>Bahasa</title>
                    <body style="background-color:FFE4C4">
<head>
</body>
<div align="right"><a href ="/TA">Back</a></div>
<h1 align="left">Bahasa di Propinsi Papua</h1>
<p align="left">Daftar Bahasa Sebagai Berikut:</p>
<table width="860" border="1">
    <tr>
      <th width="31" scope="col">NO</th>
    <th width="269" scope="col">Bahasa</th>
    <th width="244" scope="col">Daerah</th>
        <th width="121" scope="col">Action</th>
    </tr>
<?php
```

```php
//  Function linking code with phpMyAdmin
$conn = mysql_connect("localhost","root","123456");
if (!$conn) die ("Koneksi Gagal");
mysql_select_db("dbpapua",$conn) or die ("Database not found");
//  Mysql function to display all the data Language
$result = mysql_query("SELECT * FROM bahasa");
while($row = mysql_fetch_array($result)){
?>
//  command to display the list of languages
        <tr>
    <th scope="row"><?php echo $row["no"]; ?></th>
    <td style=><?php echo $row["bahasa"]; ?></td>
    <td style=><?php echo $row["daerah"]; ?></td>
        <td><a              href="Bahasa_edit.php?id=<?php          echo
$row["no"]; ?>">Edit</a> || <a href="Bahasa_delete.php?id=<?php echo
$row["no"]; ?>">Delete</a></td>
    </tr>
<?php
}
mysql_close();
?>
        <body>
            <?php
 //  Function to display a message if no data has been stored suda
        if(isset($_GET['status'])) {
            echo "Data Sudah ada.";
        }
        ?>
  <!--  Data Form to add a new language      -->
    <form method="post" action="Bahasa_tambah.php">
        <table>
```

```
        <tr><td>NO</td><td><input                type="number"
name="no"></td></tr>
        <tr><td>Bahasa</td><td><input              type="text"
name="bahasa"></td></tr>
        <tr><td>Daerah</td><td><input              type="text"
name="daerah"></td></tr>
        <tr><td       colspan="1"><button         type="submit"
value="simpan">SIMPAN</button></td></tr>
    </table>
   </form>
  </body>
</table>
</html>
    11.    Added php script language
<?php
if(isset($_POST['no'])) {
  // Function linking code with phpMyAdmin
     $conn = mysql_connect("localhost","root","123456");
     if (!$conn) die ("Koneksi Gagal");
mysql_select_db("dbpapua",$conn) or die ("Database not found");
  // Mysql function to add Data Language
     $result    =    mysql_query("INSERT    INTO    bahasa
VALUES(".$_POST['no']." ,'".$_POST['bahasa']."','".$_POST['daerah']."')");
 // Function to check whether the data Language successfully saved or
not
  if($result == TRUE) {
          header('location:Bahasa.php');
     } else {
          header('location:Bahasa.php?status=data_ada');
     }
}
```

```php
?>
<?php
if(isset($_POST['no'])) {
