CHAPTER 6
CONCLUSION

6.1 Conclusion

Conclusion of project clustering is a program that is used to classify the sentence based on the hash value of the sentence.

This program uses data structured linked list contained in java to store any results. Because the data inputed dynamically so that the result is also dynamically. The results obtained are distinctly different proximity value to adjust each sentence and the amount of clustering.

6.2 Future research

For this project in the future, expectation can group the content of an article with other articles.
