

CHAPTER 6

CONCLUSION

6.1. Conclusion

This project has information about the culinary place in Semarang. The program uses the Google Maps API and is fixed in Semarang, Central Java. Retrieval of data already available from the Google Maps API so that only need to modify in accordance with the use of the program is needed. According to the survey there are many varied culinary attractions such as restaurant, cafe, beer and much more. Inconclusive Google Maps API makes it easy to find the place of culinary tourism based on operational hours, the route and the distance of the location of the user.

6.2. Suggestion

For the future, this project can be developed in terms of review favorite culinary attractions, for example, can display the latest photo updates, has a rating of the most numerous on the visit and have a bookmark in your favorite category from the user.
