CHAPTER 6
CONCLUSION

This sorting visualization uses shell and exchange methods. Both methods were chosen because they were taught in the first semester of lecture in Informatics Engineering Department. The purpose of this sorting visualization is to show the sorting process and help users understand how to sort it. This visualization not only displays the answer, but also shows the way of completion sequence from the first iteration process to the end. This program was created using HTML5 and supported javascript.

This visualization program has not been animated process. For further research this program can be added to the animation on the display.
