

CHAPTER V

IMPLEMENTATION AND TESTING

5.1 Implementation

Firstly, I setup Ubuntu 10.10 Operating System. Then, I setup apache as the web-server and mysql as the sql-server. Mysql is used by gammu to save its database. Finally, I setup gammu as the daemon application to read and write to modem device.

5.1.1 Install Web-server

1) Install Apache

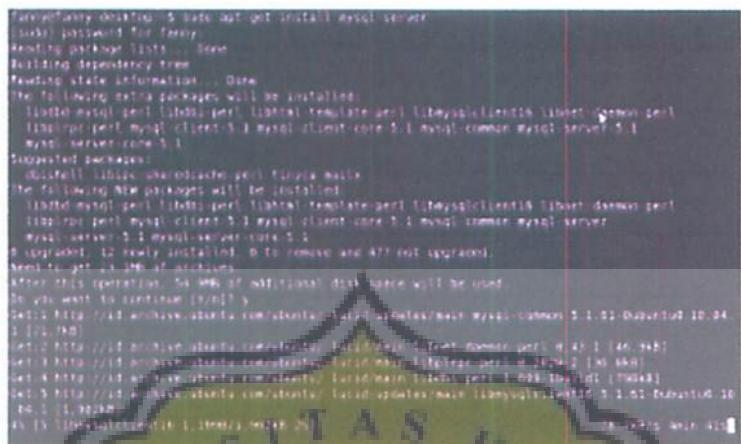

```
#sudo apt-get install apache2
```

Figure 5.1.1.1 Installation Apache

2) Install MySql

```
#sudo apt-get install mysql-server
```

```
larry@larry-debian: ~ $ sudo apt-get install mysql-server
[sudo] password for larry:
Reading package lists... Done
Building dependency tree... Done
Reading state information... Done
The following extra packages will be installed:
libio-mysql-perl libdbi-perl libhtml-template-perl libmysqlclient-dev libnet-dns-perl
libapr-util-perl mysql-client-5.1 mysql-client-core-5.1 mysql-common mysql-server-5.1
mysql-server-core-5.1
Suggested packages:
libdbd-mysql-perl libmysqlclient-dev
The following NEW packages will be installed:
libio-mysql-perl libdbi-perl libhtml-template-perl libmysqlclient-dev libnet-dns-perl
libapr-util-perl mysql-client-5.1 mysql-client-core-5.1 mysql-common mysql-server
mysql-server-5.1 mysql-server-core-5.1
0 upgraded, 12 newly installed, 0 to remove and 477 not upgraded.
Need to get 0 B of additional disk space.
After this operation, 54.9 MB of additional disk space will be used.
Do you want to continue [Y/n] y
Get:1 http://http://deb.debian.org/debian/ jessie/main mysql-common 5.1.31-0ubuntu10.04.1 [100.7kB]

```

Figure 5.1.1.2 Insall MySQL Server

After installing MySQL, password configurations window will show up. Fill the password and then type the configuration password once again.

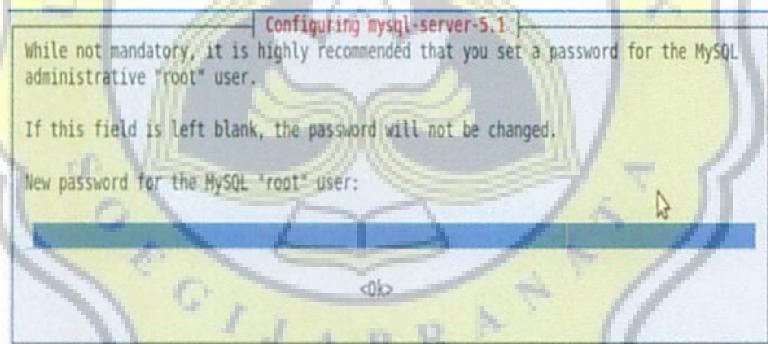

Figure 5.1.1.3 configuring-mysql-server

3) Install Php

```
#sudo apt-get php5 libapache2-mod-php5
```

After this installation **restart Apache** [*sudo /etc/init.d/apache2 restart*] don't write brackets. Now make a **phpinfo.php** file and save that in **/var/www** to do this use [*sudo gedit /var/www/phpinfo.php*] write a code in this file :

```
<?php  
phpinfo();  
?>
```

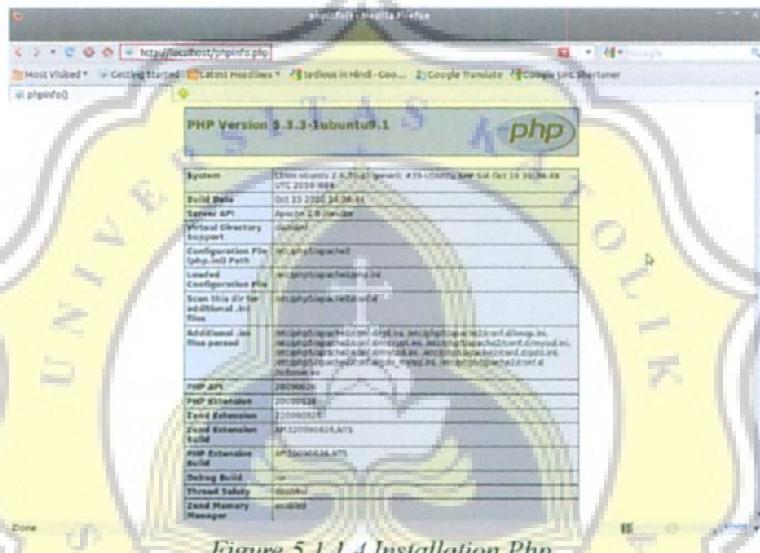

Figure 5.1.1.4 Installation Php

4) Install PhpMyAdmin

```
# sudo apt-get install phpmyadmin
```

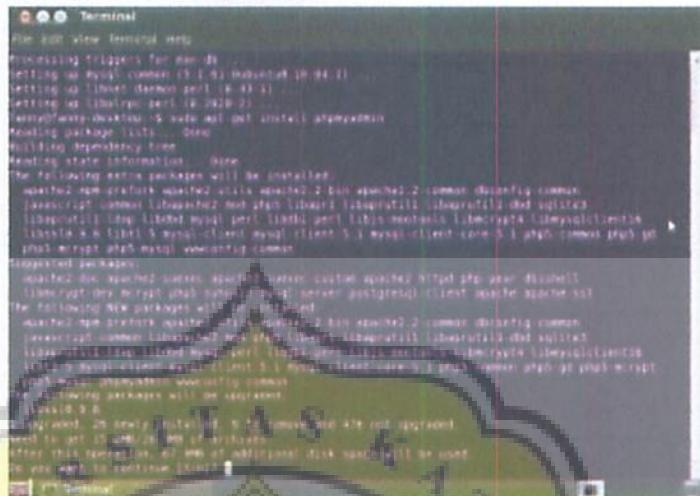

Figure 5.1.1.5 Install PhpMyAdmin

After installation is finished, it will displays a windows to specify which web server that should be use. Choose by press the space key, then configuration by 'OK'.

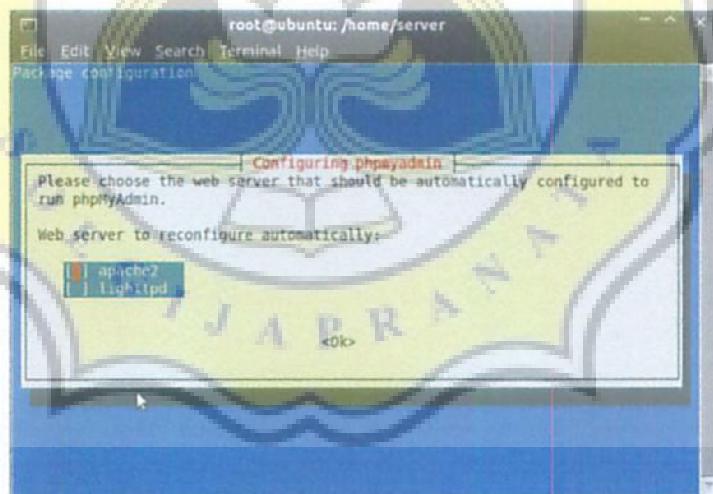

Figure 5.1.1.6 Configuring Web-server PhpMyAdmin

After chose web-server for PhpMyAdmin, configuration for PhpMyAdmin will show up, continue by 'no'.

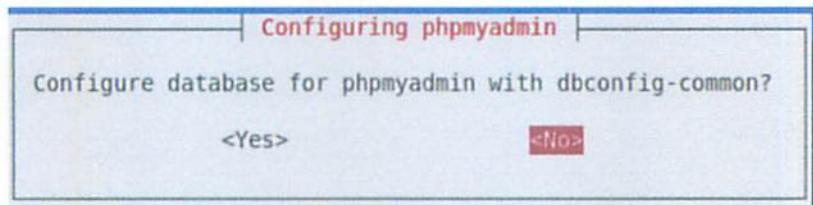

Figure 5.1.1.7 Configuring PhpMyAdmin

5.1.2 Install Gammu Packages

After Operating System and Web-server was setup, then I setup of gammu include libgammu, gammu-smsd, gammurc to support this application. Where gammu-smsd is configuration of database and the modem device to gammu. Gammurc is a configuration of modem device to gammu.

1) Setup Gammu

Figure 5.1.2.1 Install Gamma

2) Setting Permission folder

```
# sudo chmod -R 777 /var/www
```

```
# sudo chmod -R 777/usr/share/doc/gammu/examples/config/gammurc.gz  
# sudo chmod -R 777/usr/share/doc/gammu/examples/sql/mysql.sql.gz
```

3) Extract File

```
# sudo gunzip /usr/share/doc/gammu/examples/sql/mysql.sql.gz
```

```
mysql.sql
root@ubuntu:/usr/share/doc/gammu/examples/sql# []
```

Figure 5.1.2.2 Extract mysql.sql.gz

4) Check Port usb for configuration

```
# dmesg
```

Figure 5.1.2.3 Checking Port

5) Edit gammu-config,gammurc, and gammu-smsdrc

The image shows three windows related to Gammu configuration:

- Current Gammu configuration**: A terminal-like window showing a menu:
 - P Port (/dev/ttyUSB3)
 - C Connection (at)
 - M Model ()
 - D Synchronize time (yes)
 - F Log file (/etc/gammulog)
 - O Log format (textall)
 - L Use locking ()
 - G Gammu localisation ()
 - H Help
 - S Save

<Ok> <Cancel>
- gammurc**: A text editor window showing the contents of the gammurc configuration file:

```
[gammu]
port = /dev/ttyUSB3
connection = at
logfile = /etc/gammulog
logformat = textall
use_locking = yes
```
- gammu-smsdrc**: A text editor window showing the contents of the gammu-smsdrc configuration file:

```
# Configuration file for Gammu SMS Daemon

# Gammu library configuration, see gammurc(5)
[gammu]
# Please configure this!
port = /dev/ttyUSB3
connection = at
startinfo = yes
# Debugging
logformat = textall

# SMSD configuration, see gammu-smsdrc(5)
[smsd]
service = mysql
DeliveryReport = sms
logfile = /etc/smsdlog

# Increase for debugging information
debuglevel = 255
user = root
password = mist1441
pc = localhost
database = gammu

# Paths where messages are stored
inboxpath = /var/spool/gammu/inbox/
outboxpath = /var/spool/gammu/outbox/
sentsmspath = /var/spool/gammu/sent/
errorssmspath = /var/spool/gammu/error/
```

Figure 5.1.1.6 Configuring Web-server PhpMyAdmin

6) Check Gammu --identify

```
#gammu -identify
```

```
root@ubuntu:/# gammu -identify
Device          : /dev/i2c0
Manufacturer   : huawei
Model          : unknown (6173)
Firmware       : 11.126.15.00.209
IMEI           : 867455004155741
SIM IMEI      : 510890991301982
root@ubuntu:/#
```

Figure 5.1.2.5 Gammu Identify

7) Daemon mysql.sql

Daemon mysql.sql from extract in /usr/share/doc/gammu/examples/ to database using name gammu.

```
#mysql -u root -p smsd > mysql.sql
```

```
root@ubuntu:/# cd /usr/share/doc/gammu/examples/sql/
root@ubuntu:/usr/share/doc/gammu/examples/sql# mysql -u root -p gammu < mysql.sql
Enter password:
```

Figure 5.1.2.6 Daemon mysql.sql to Database

Figure 5.1.2.9 Check

5.1.3 Web Implementation

At this application, all the data is store at the database gammu in PhpMyadmin. So every time gammu is receiving messages, it will directly store in table inbox. When Gammu is sending a reply to sender, it will store a messages to outbox table and then wait until gammu successfully send the messages. The messages which has been successfully sent next will be store in sentitems table.

1. Connect to Database

```
connect.php
<?php
$connect = mysql_connect("localhost","root","misi1441");
if(!$connect)
{
    echo "Failed to connect mySQL<br/>";
}
?>
```

Figure 5.1.3.1 Database connection Php Script

2. Add Database

```
<?php
include 'connect.php';
$tblUser = "Create database if not exists gammu";
$tblUserQuery = mysql_query($tblUser);
$tblUserQuery = mysql_select_db("gammu");

//User
$tblUser = "create table if not exists tbUser(username varchar(10) primary key, password varchar(100))";
$tblUserQuery = mysql_query($tblUser);

//Pelanggan
$tblPelanggan = "create table if not exists tbPelanggan(id_pelanggan varchar(15) primary key not null,
nama_pelanggan varchar(100) not null, alamat_pelanggan varchar(100) not null, no_hp varchar(100) not null, no_telpone varchar(100) not null)";
$tblPelangganQuery = mysql_query($tblPelanggan);

//Kategori Menu
$tblKategori = "create table if not exists tbKategori(id_kategori varchar(15) primary key not null,
kategori_menu varchar(100) not null)";
$tblKategoriQuery = mysql_query($tblKategori);

//Menu
$tblMenu = "create table if not exists tbMenu(id_menu varchar(15) primary key not null, nama_menu varchar(100) not null,
id_kategori varchar(15) not null, harga int, time_cook int, Foreign key (id_kategori) references tbKategori(id_kategori));
(id_kategori) on delete cascade on update cascade";
$tblMenuQuery = mysql_query($tblMenu);

//Booking
$tblBooking = "create table if not exists tbBooking(id_booking int primary key not null, id_pelanggan varchar(15) not null, jatuh_tempo varchar(15) not null, time_booking varchar(50) not null, status varchar(50) not null default 'belum selesai', foreign key (id_pelanggan) references tbPelanggan (id_pelanggan) on delete cascade on update cascade";
$tblBookingQuery = mysql_query($tblBooking);

//Meja
$tblMeja = "create table if not exists tbMeja (no_meja int primary key not null, kapasitas int, status varchar(50) not null default 'belum terpakai', no_seating int, foreign key (no_seating) references tbBooking (no_booking) on delete cascade on update cascade)";
$tblMejaQuery = mysql_query($tblMeja);

//Order
$tblOrder = "create table if not exists tbOrder(id_order int primary key not null, id_pelanggan varchar(15) not null, time_order varchar(50) not null, time_fini varchar(50) not null, time_dib int not null, jenis_order varchar(50) not null, status varchar(20) not null default 'belum', Foreign key (id_pelanggan) references tbPelanggan (id_pelanggan) on delete cascade on update cascade";
$tblOrderQuery = mysql_query($tblOrder);
```

Figure 5.1.3.2 Add Database Using Php Script

3. Login

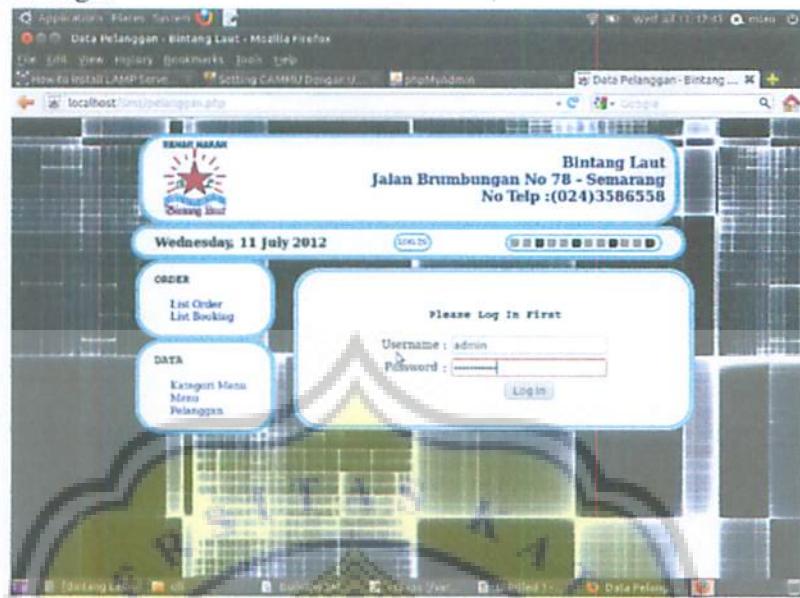

Figure 5.1.3.3 Login Php

After login

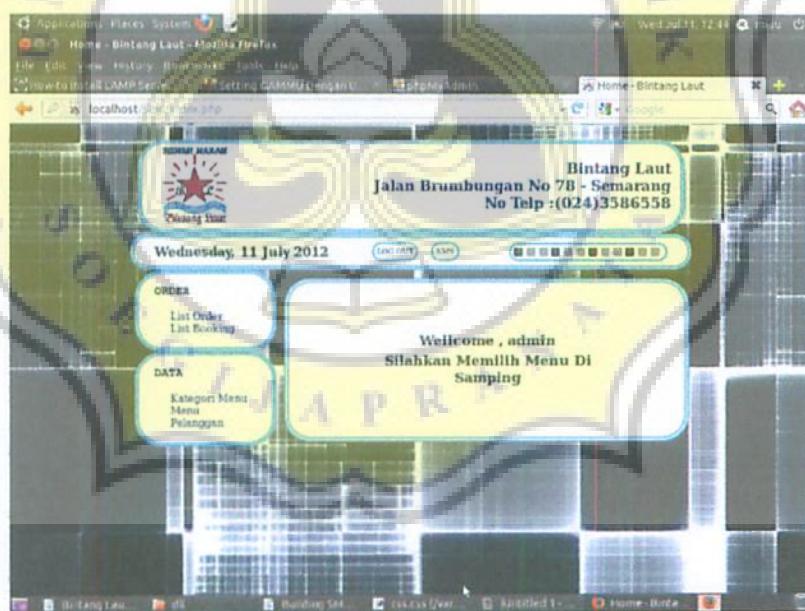

Figure 5.1.3.4 Welcome Php

4. Form Pelanggan

The screenshot shows a web-based application titled "Data Pelanggan - Bintang Laut". The main window displays a form for adding a new customer ("ADD Pelanggan"). The form fields include: ID Pelanggan (text input), Nama Pelanggan (text input), Alamat Pelanggan (text input), No Handphone (text input), and No Telephone (text input). Below the form is a table titled "List Data Pelanggan" showing one record:

NO SMS	ID Pelanggan	Nama Pelanggan	Alamat	No Handphone	No Telephone	Edit	Hapus	
1	R01	Roni	Jl. bla bla	123456	088806278206	0		

Figure 5.1.3.5 Pelanggan Php

Fill in customer data into database. Id pelanggan is primary key
tblPelanggan.

The screenshot shows the same application window as Figure 5.1.3.5. The "ADD Pelanggan" form now contains the following data:

ID Pelanggan	Nama Pelanggan	Alamat	No Handphone	No Telephone
R02	Dwi Rosita	Jl. Imbiah 12	08127655055	123456

The "List Data Pelanggan" table now shows two records:

NO SMS	ID Pelanggan	Nama Pelanggan	Alamat	No Handphone	No Telephone	Edit	Hapus	
1	R01	Roni	Jl. bla bla	123456	088806278206	0		
2	R02	Dwi Rosita	Jl. Imbiah 12	08127655055	123456	0		

Figure 5.1.3.6 Fill Data Pelangan

If the data successful input insert the database

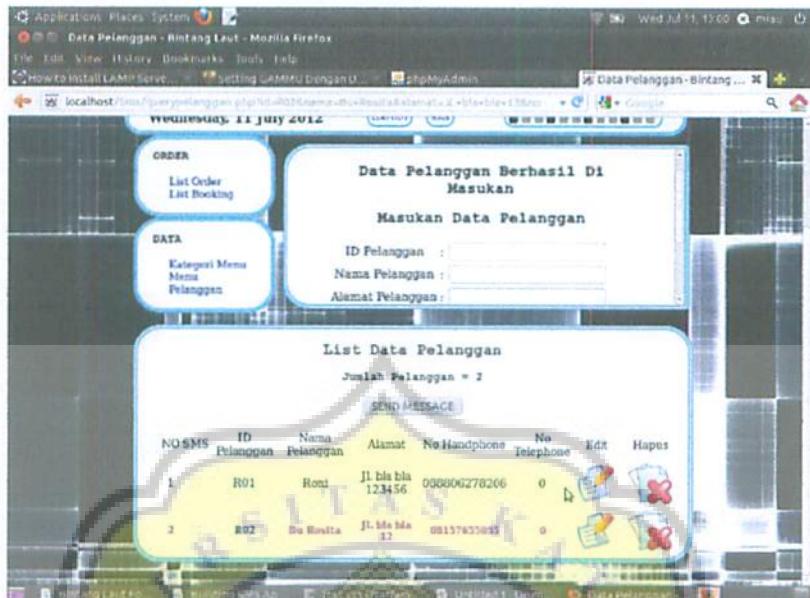

Figure 5.1.3.7 Data Pelanggan Successfully insert Into Database

If the data failed insert into the database

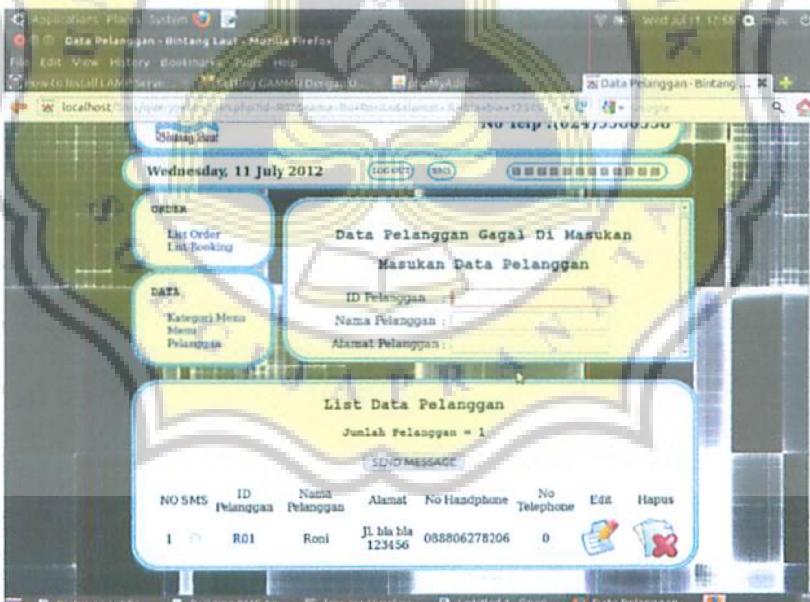

Figure 5.1.3.8 Data Pelanggan Failed insert Into Database

5. Form Kategori Menu

The screenshot shows a Mozilla Firefox browser window with a web application titled "Jenis Menu - Bintang Laut". The application has a sidebar on the left with "ORDER" and "DATA" sections. The "DATA" section contains "Kategori Menu Name Pelanggan". The main area has a form titled "Masukan Data Jenis Menu" with fields for "ID Kategori" and "Kategori Menu", and a "ADD Kategori" button. Below this is a table titled "List Kategori Menu" with 4 rows:

NO	ID Kategori	Kategori Meus	Edit	Hapus
1	Ayam	Masakan Dari Ayam		
2	Sapi	Masakan Dari Sapi		
3	Cumi	Masakan Dari Cumi-Cumi		
4	Kiduk	Masakan Dari Kiduk		

Figure 5.1.3.9 Kategori Menu Php

This form is showing category for menu, adding new category, editing category, and deleting category. This table is connected to the table `tblMenu` using `id_kategori` on `tblKategori`.

6. Form Menu

The screenshot shows a web application titled "Menu - Bintang Laut" running in Mozilla Firefox. The interface includes a sidebar with "ORDER" and "DATA" sections, and a main area for "Masukan Menu" (Add Menu) and "List Menu". The "List Menu" section displays a table with 86 items, showing columns for NO, ID Menu, Nama Menu, Kategori Menu, Harga, and Waktu Masaik. Each row has edit and delete icons.

NO	ID Menu	Nama Menu	Kategori Menu	Harga	Waktu Masaik	Edit	Hapus
1	AA	Rebus	Ayam	22	10		
2	AB	Rasoi	Ayam	22	10		
3	AC	Nanking	Ayam	22	10		
4	AD	Kukuyuk	Ayam	22	10		

Figure 5.1.3.10 Menu Php

This form is showing all menu, adding new menu, editing menu, and deleting menu. This table is connected to the table tblRinciOrder using id_menu on tblMenu.

7. Form Auto Reply

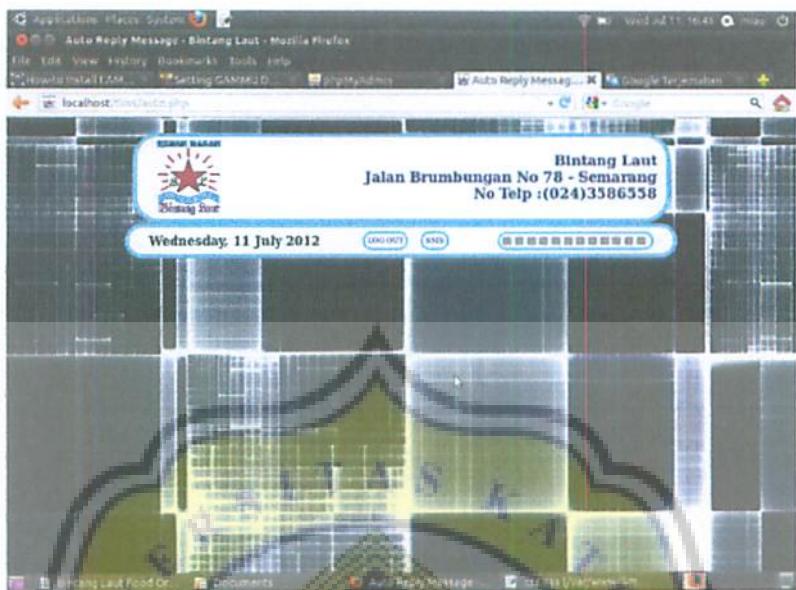

Figure 5.1.3.11 Auto Reply Php

This form for automatically reply sms from inbox where user must registered their phone number. This form reply sms by keyword in text sms from user. To show all keyword user just have to send sms who contain text "HELP" and then this form will auto reply user with sms containing keyword for show menu, ordering, change order, and many more. This the some code on this form :

```
<?php
    session_start();
?>
<!DOCTYPE html PUBLIC "-//W3C//DTD XHTML 1.0 Transitional//EN" "http://www.w3.org/TR/xhtml1/DTD/xhtml1-transitional.dtd">
