APPROVAL AND RATIFICATION PAGE
PROJECT REPORT
COMPARISON EDGES DETECTION
USING TWO MATRIX

This project report has been approved and ratified by the Dean of faculty of Computer Science and Supervisor on January 10th 2013

With Approval,

Examiners,

Suyanto EA.,Ir.M.Sc

NPP : 058.1.1992.116

Supervisor,

Shinta Estri Wahyuningrum, S.Si., M.Cs

NPP : 058.1.2007.272

Examiners,

Rosita Herawati,ST.,MIT

NPP : 058.1.2004.263

Examiners,

Hironimus Leong, S.Kom., M.Kom

NPP : 058.1.2007.273

Examiners,

Robertus Setiawan Aji ST.McompIT

FOREWORD

Thanks to God who has blessed me always, so the writer can be complete this project with title “COMPARISON EDGES DETECTION USING TWO MATRIX”.

In this opportunity, writer would thanks to :

1. My father and my mother, that made me never to think of giving up.
2. People are always on my side, who have always supported me and always giving spirit to me.
3. Mrs. Shinta Estri Wahyuningrum, S.Si., M.Cs as my supervisor, for his advice, and ideas that inspired me.
4. All lecturers in Faculty of Computer Science.
5. My friend which give prayer and encouragement.

Finally, writer apologizes if there are still many shortcomings in this project. Hopefully this project can be used to all parties who require.

Semarang, January 10th 2013

ABSTRACT

In the digital image, there are many different ways of image processing. And one of the interest one that is Edges Detection. Is tool in image processing particularly in the areas of feature detection and feature extraction, which aim at identifying points in a digital image at which the image brightness changes sharply. Edges detections are generally used to separate object with background, so that more objects can be easier to process. In the Edges detections, there are several existing methods, namely Sobel , Canny, Prewitt, Roberts, and Frei-Chen.

Operator Sobel is based on convolving the image with a small, separable, and integer valued filter in horizontal and vertical direction and is therefore relatively inexpensive in term of computations. The gradient approximation that it produces is relatively crude, in particular for hight frequency variations in the image.

Keywords : Edges Detection, Java, Image processing
