

CHAPTER VI

CONCLUSION AND FURTHER RESEARCH

6.1 Conclusion

This program can make us know differences between sobel with matrix 3×3 and 5×5 . When use matrix 5×5 is thicker edges then matrix 3×3 . Both can form a good object so that can be recognized.

6.2 Further Research

This program still need a further research. That is about how to process sobel with the width and height of a dynamic. So that result after edges detection not mess, and can be research for use sobel edges detection with maybe use matrix 4×4 , 7×7 , etc.
