## **ABSTRACT**

Destitution is one of the problems that arise in the construction together with the problems of unemployment and inequality are three intertwined. Destitution becomes more often discussed because of the increase in the number of poor people is quite sharp caused by the economic crisis. In the Badan Pusat Statistik (BPS) data on destitution is still the raw data, the absence of destitution mapping.

Based information system mapping to be the solution in this problem, because the mapping-based information system is a system that can display the location of data on destitution, destitution data, and graphs destitution level. The programming language used in this study is PHP with a MySQL database. As for the destitution data mapping is implemented with Google Maps.

Based on the test results, it can be concluded that this system can help manage the raw data into a mapping with a database-based data management, simplify monitoring of areas of destitution that exist in Indonesia from year to year, showing graphs of destitution of each of each province in Indonesia.

**Keywords:** Website, PHP, MySQL databases, Google Maps

## **FOREWORD**

Writer would like to thank the Lord Jesus Christ help me, providing inspiration and provides a smooth inside finish my thesis and always provides a way out in preparing this project. Also without the role of these people, I would like to thank: My parent, My Sister always gave me support, spirit and prayer, All my lecturers in faculty computer science that has guided me, gave input and knowledge, All my friends class of 2009 in Faculty of Computer Science, friend of the guidance which has been a friend to share knowledge, laughter and stories as well as any other friends keep motivate me.

I would be grateful for faculty computer science UNIKA who helped me in giving lessons related to my thesis Many power struggles, stories and memories during a lecture at the faculty, I hope the faculty of computer science UNIKA forward again for the future. thank you for the entire family UNIKA computer science faculty.
