

## **CHAPTER VI**

### **CONCLUSION AND FURTHER RESEARCH**

#### **6.1 Conclusion**

This application can simulate basic concepts of fractional. It can automatic count calculation of fraction and It have back sound with sound mouse on click, and the application can be understood easily and has an attractive appearance. So it can make children easy to understanding the comparison material of fraction visually.

#### **6.2 Further Research**

This application still focused in in helping children to understand the basic material fraction. However, this application has not fully provide the facility to play more interesting.

In further development, this application will be able to dchoose a picture piece of pizza not by clicks, but by drag and drop the picture and more animation to simulate the fraction.
