## APPROVAL AND RATIFICATION PAGE

### PROJECT REPORT

#### Implementation of the RGB image Thresholding

This project report has been approved and ratified by the Dean of Faculty of Computer Science and Supervisor on July, 15<sup>th</sup> 2014

With approval,

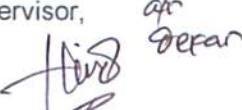

Examiners,

  
Suyanto Edward Antonius, Ir., M.Sc  
NPP : 058.1.1992.116

Examiners,

  
Rosita Herawati, ST., MIT  
NPP : 058.1.2004.263

Supervisor,

  
Shinta Estri Wahyuningrum, S.Si, M.Cs  
NPP : 058.1.2007.272

Examiners,

Dean of Faculty of Computer Science,

  
Hironimus Leong, S.Kom., M.Kom  
NPP : 058.1.2007.273

### **STATEMENT OF ORIGINALITY**

I, the undersigned:

Name : Njoo, Vega Monica

ID : 10.02.0015

Certify that this project was made by myself and not copy or plagiarize from other people, except that in writing expressed to the other article. If it is proven that this project was plagiarizes or copy the other, I am ready to accept a sanction.

Semarang, July 18<sup>th</sup> 2014

## **FOREWORD**

After four years, I have studied in Faculty if Computer Science of Soegijapranata Catholic University. Finally, I have been able to make a Project as a requirement of my graduation. Though this project, I have learned a lot of experience and knowledge of Implementation of Grayscale and Thresholding.

When I made this project, I have been helped by a lot of people. In this opportunity I would say thank you to :

1. My Lord Jesus Christ, for His blessing and miracle so I can finish my project.
2. My Parents for their support, love, and pray.
3. My Brother who never tired give me motivation everyday.
4. My Sister who never tired give me motivation everyday too.
5. My Project Supervisor for this advice and motivation
6. All of my lectures in Faculty of Computer Science whom teaching and giving a lot of knowledge when I studied in this faculty.

Semarang, July 16<sup>th</sup> 2014

Njoo Vega Monica

## **ABSTRACTION**

At this stage of the creation of this project there are several problems facing the display output from the process image thresholding, while its output too much, so that the frame is not enough to display the gui results output and a frame graphical grayscale on the process too loose, because only three output are displayed.

Troubleshooting is a gui that frame is enough to load the output of the image thresholding is by enlarging the size of the image frames and small size inputed. To process grayscale are also using the same method, though only three image output, the image is not clipped, the size of the images can be enlarged.

The result of the implementation of the grayscale image is grayscale thresholding image is grayscale and thresholding its conversion to two-bit and four-bit. While the thresholding also has different results by using the RGB color channels, each color converted two-bits and four-bits.

***keywords: rgb, grayscale, thresholding***
