

## **CHAPTER VI**

### **CONCLUSION and FURTHER RESEARCH**

#### **6.1 Conclusion**

This application can predict pre order items with Apriori Algorithm. The data will be eliminated if frequency is smaller than minimal support. If it is get out from minimal support, data will joined with two and three items until find out the prediction. What can be developed from this program is how to browse text file which can be inputted in this program and then this program can make join until join four or five.

#### **6.2 Further Research**

What can be developed from this program is how to browse text file which can be inputted in this program and then this program can make join until join four or five.
