CHAPTER VI
Conclusion and Further Research

6.1 Conclusion

The application can simulate the concept of recursive functions. It can determine how a solution to the problem menyelesaaikan disc displacement in hanoi tower, and can also choose how many discs will be played so that these applications can be easily understood and can bring the function runs. So that students can make the data easier to understand the material structure and algorithms.

6.2 Further Research

This program is still simple enough and it can be developed for better function and more features. And also it can be modified for more interesting display.
