

CHAPTER I

INTRODUCTION

1.1 Background

Paritta Chanting Book is a book that contain many sutras from the basic of teachings of the Buddha. Paritta Chanting or Sutra Chanting is a well-known Buddhist practice conducted all over the world, especially in Theravada Buddhist countries where the Pali language is used for recitals.

Sometimes the Buddhist community maybe feel lazy for carry the Paritta Chanting Book everytime. Imagined a huge number of sutras which recorded in only one book and when the Buddhist community need to look for one or some sutras, they must search it by opening the Paritta Chanting Book and search the paritta one by one manually. It will spend so many times and makes their become not effective and efficient. So, the Buddhist community need an application which can organize and search the huge number of sutras based on Android platform. That application can be brought anywhere and can be used anytime too.

1.2 Scope

This project will give a solution of searching many sutras. While the Buddhist community need Paritta Chanting Book, they can use Paritta application on Android. So the Buddhist community can use the application effectively.

1.3 Objectives

The project is purposed to make easier in searching the database of Paritta. The program provides a systematic features that can process the search of database faster than manual processes. For the example, getting a paritta or a sutra with certain Indonesian word.
