

CHAPTER V

IMPLEMENTATION AND TESTING

5. 1 Implementation

This application has five steps that must be done, for the first step you. Needs to input the file first. The input file here only serves to storing card data from kartu.txt.

5.1.1 Step 1 - Storing Card Data From kartu.txt.

```

/*
1 int main(void)
2 {
3     FILE *fp;
4     if((fp=fopen("kartu.txt","r")) == NULL) // membaca kartu.txt
5     {
6         printf("Cannot open file.\n");
7         exit(1);
8     }
9     i = 0;
10    while(!feof(fp))
11    {
12        fscanf(fp,"%\n[^;];%[^;]\n",record[i].nama,record[i].jenis,&record[i].nilai);
13        record[i].id = i+1;
14        i++;
15    }
16    randomize_cards();
17    while(p !=4)
18    {
19        menu();
20        printf("silahkan pilih menu:");
21        scanf("%d",&p);
22        switch(p)
23        {
24            case 1: printf("%s|\t|%s|\t|%.2f\n",record[i].nama,record[i].jenis,record[i].nilai);
25                for(i=0; i<5; i++)
26                {
27                    fprintf(stdout,"%s\t%s\t%.2f\n",record[i].nama,record[i].jenis,record[i].nilai);
28                }
29                printf("\n");
30                break;
31            case 2: randomize_cards();
32        }
33    }
34 }

```

5.1.2. Step 2 – Random Card

The second step, in the second step we have to random cards in array .

Function to random cards is as follows.

```
3
5
7
9 void randomize_cards() //random kartu
3{
3    srand (time(0));
1    int r;
2    int angka_deck[52]; //untuk menampung index index kartu hasil random
3    bool kartu_terambil[52]; //untuk mengecek apakah kartu yang di random sudah ada di 'angka_deck'
4    for (i=0; i<52; i++) //looping 52/ada 52 kartu kosong buat 52 kartu
5    {
6        kartu_terambil[i] = false; //menandai bahwa kartu belum masuk ke dalam 'angka_deck' kartu_terambil =[];
7    }
8    for (i=0; i<52; i++) //looping 52 kartu untuk mengisi 'angka_deck'
9    {
3        r = rand()%52;
1        angka_deck[i] = r;
2        while (kartu_terambil[r] == true) //looping jika ternyata angka yang baru saja di random sudah masuk di
terambil sama dengan kartu yang di ambil maka akan di random
3        {
4            r = rand()%52;
5            angka_deck[i] = r;
6        }
7        kartu_terambil[r] = true;
8    }
9    for (i=0; i<52; i++)
3    {
1        deck[i] = record[angka_deck[i]]; //deck[i] mensimpan kartu yang di random
2    }
3}
4
5 undi urutkan kartu[int index pemain] //menurunkan id kartu pemain berdasarkan id kartu pada record
```

5.1.3 Step 3 – Game Started

The third step, the third step the game starting

```

    randomize_cards();
    while(p !=4)
    {
        menu();
        printf("silahkan pilih menu:");
        scanf("%d",&p);
        switch(p)
        {
            case 1: printf("%s\n",record[0].nama);
            break;
            case 2: randomize_cards();
            for (i=0; i<52; i++)
            {
                printf("%s",record[i].nama,record[i].jenis,record[i].nilai);
            }
            printf("\n");
            break;
            case 3: mutasi_main();
            break;
            case 4: printf("keluar\n");
            break;
            default:printf("Salah Masukan Menu\n");
            exit(0);
        }
    }
    return 0;
}

void cuci_main()
{
    jumlah_pemain();
    bates();
    bagi_kartu_semuanya(3); //tiap pemain mendapatkan 3 kartu awal
    lihat_kartu_main();
    while(q !=6)
    {
        menu_main();
        printf("silahkan pilih menu:");
        scanf("%d",&q);
        switch(q)
        {
            case 1: jawab_pemain();
            break;
            case 2: bagi_kartu_semuanya(10);
            lihat_kartu_main_semuanya();
            break;
            case 3: urutkan_kartu_semuanya();
            lihat_kartu_main();
            break;
            case 4: printf("Lihat Minuman:\n");
            lihat_kartu_minuman();
            break;
            case 5: reset_kartu();
            randomize_cards();
            bagi_kartu_semuanya(3);
            lihat_kartu_main();
            break;
            case 6: printf("Selesai main\n");
            exit(0);
            break;
        }
    }
}

```

Still in the third step, the user can set the number of players and the minimum value of the card. Function to set the number of players and the minimum value of the card is as follows.

```

9         pemain[i].total = 0;
0         pemain[i].jumlahkartu = 0;
1         for (j=0; j<3; j++)
2         {
3             pemain[i].kartutangan[j].nilai = 0;
4         }
5     }
6 }
7
8 void jumlah_pesain() //fungsi mengatur jumlah pemain
9 {
0     player = 0;
1     while(player > 7 || player < 2) //batas player 2 sampai 7 / jika player lebih dari 7 atau kurang dari 2 loopin
2     {
3         printf("Banyak Pesain(2 - 7):");
4         scanf("%d",&player);
5     }
6 }
7
8 void batas() //fungsi mengatur batas minimal nilai kartu
9 {
0     batas.nilai = 5;
1     while(batas.nilai > 25 || batas.nilai < 20) //batas nilai angka 20 sampai 45 / jika batas nilai lebih dari 45 .
2     {
3         printf("Masukkan Batas Minimal Nilai Kartu (20-25):");
4         scanf("%d",&batas.nilai);
5     }
6 }
7
8 void randomize_cards() //random kartu
9 {

```

After that, each player gets three cards at random. The function of each player receives three cards at random. This program is as follows.

```

1     cek_peringkat();
2
3
4 void bagi_kartu(int index_pesain) //bagi kartu per index pesain
5 {
6     pemain[index_pesain].kartutangan[pemain[index_pesain].jumlahkartu]=deck[kartu_teratas]; //memasukan kartu dari
7     tangan pesain pada index terakhir yang masih kosong
8     pemain[index_pesain].jumlahkartu++;
9     kartu_teratas++;
10 }
11
12 void bagi_kartu_semuatint(jumlah)
13 {
14     while(jumlah>0)
15     {
16         cek_total();
17         for (i=0; i<player; i++)
18         {
19             if (pemain[i].total < batas.nilai) //jika total dari pesain ber index i kurang dari batas nilai
20             index i) di bagikan sebanyak jumlah
21             {
22                 bagi_kartu(i);
23             }
24         }
25         jumlah--;
26     }
27     cek_total();
28 }
29
30 void lihat_kartu_main()
31 {

```

```

38 {
39     cek_total();
40     printf("\n");
41     for(i=0; i<player; i++)
42     {
43         if (i==0)
44         {
45             printf("Kartu Anda\t\t");
46         }
47         else
48         {
49             printf("Kartu pemain %d\t\t", i);
50         }
51     }
52     printf("\n");
53     for(j=0; j<13; j++)
54     {
55         for(i=0; i<1; i++)
56         {
57             if (j >= pemain[i].jumlahkartu)
58             {
59                 printf("\t\t\t\t");
60             }
61             else if(pemain[i].kartutangan[j].nilai!=0)
62             {
63                 printf("%s\t\t\t\t%d\t\t",pemain[i].kartutangan[j].nama,pemain[i].kartutangan[j].jenis.pes
64             }
65         }
66         printf("\n");
67     }
68     for(i=0; i<1; i++)
69     {

```

5.1.4 Step 4 - Adding cards for user(kartu anda)

Once the user reaches a minimum value of the card, the user has the right to add the card if the card has not reached the target obtained. function is as follows.

```
78 }
79
80 void jawab_pemain()
81 {
82     char jawab;
83     printf("Anda ambil kartu? tekan Y or N. ");
84     scanf(" %c", &jawab);
85     while (jawab == 'Y' || jawab == 'y')
86     {
87         bagi_kartu(0);
88         lihat_kartu_main();
89         printf("\nAda kartu lagi? Y or N. ");
90         scanf(" %c", &jawab);
91     }
92     lihat_kartu_main();
93 }
94
95 void lihat_kartu_main()
96 {
97     for (i=kartu_teratas; i<52; i++)
98     {
99         printf("%s\t%s\t%d\n", deck[i].nama, deck[i].jenis, deck[i].nilai);
100    }
101 }
102
103 void mulai_main()
104 {
105     jumlah_pemain();
106 }
```

```
107
108
109 int i = pemain[1].jumlahkartu;
110 {
111     break;
112 }
113 total = total + pemain[i].kartutangan[i].nilai;
114
115 pemain[i].total = total;
116 if (pemain[i].total > 30)
117 {
118     pemain[i].kalah = true;
119 }
120
121 cek_peringkat();
122 }
123
124 void bagi_kartu(int index_pemain) //bagi kartu per index pemain
125 {
126     pemain[index_pemain].kartutangan[pemain[index_pemain].jumlahkartu]=deck[kartu_teratas]; / tangan pemain pada index terakhir yang masih kosong
127     pemain[index_pemain].jumlahkartu++;
128     kartu_teratas++;
129 }
130
131 void bagi_kartu_seua(int jumlah)
132 {
133     while(jumlah>0)
```

5.1.5 Step 5 – Game Over

Once the user reaches the maximum value or the user is not willing to add another card user can view the results. function is as follows.

5.2 Interface

5.2.1 Main Menu Window

Step by step for playing card samgong

Step 1 : Compile and run samgong.c

```
File Edit View Search Terminal Help
andri@andri-PC:~$ su
