

## **CHAPTER VI**

### **Conclusion and Further Research**

#### **6.1 Conclusion**

This application can make the user create infinite combination of track. The program can solve problem given by the user, but sometimes with even edges program show the wrong solution. And the program can explain to user how program solve the user's problem.

#### **6.2 Further Research**

This application still focused at finding the path on non eulerian pattern and need a lot of further development because this application sometimes show incorrect results when facing many odd vertices.

In further development, this application will able to show 100% correct result tough dealing with many odd vertices.
