

## CHAPTER 5

### CONCLUSION AND SUGGESTION

#### 5.1 Conclusion

Based on the analysis that the writer had done, there is a conclusion that could be inferred. It is as follows:

##### 1. The Swearwords

Swearwords are actually the taboo words which are used when the people want to express powerful emotions by using 'strong' language. When people swear, taboo words usually change their meanings completely. According to (Swan, 2005), there could be 10 categories of swearwords.

The writer found out that among the examples of the Facebook status, the category which appeared the most frequently was insult (noun) category. There were 7 examples which could be put under the category. Meanwhile there were two categories that the writer did have the examples. They were the insult (imperative verb+object) and violent refusal.

#### 5.2 Suggestion

In the future, there were some suggestions that the writer could give to anyone who are interested to make any study about the swearwords. First, the scholar can be more specific with the subject of research whether they might be a certain group or else because the writer did not really specify the object of his

study since he found the words randomly from the search engine. Second, the writer also hopes that everyone who is interested in having a study about taboo words and swearwords could use other resources. It would be interesting if the theory used to analyse the Indonesian taboo words and swearwords. It would give the readers a better understanding about both the taboo words and swearwords.
