CHAPTER 1
INTRODUCTION

1.1 Background

Asking people around to know the direction of the destination, is a process that is often done by people to find out the direction of the location in detail.

The number of people around who sometimes lacks detail in providing information on the direction of the destination makes the person working in the courier confused, and makes the delivery of the courier goods long.

The above problems can be solved by using an animated map application, that can show a definite direction and can be accessed quickly. The HTML5 is used to make the display and also the appearance of the animation easy for users to understand.

1.2 Scope

Scope of this project are:

1. Is using HTML5 and CSS3 able to make a map?
2. Can into able to draw on HTML5 and CSS3?
3. How do animation or moving image work in HTML5 and CSS3?

1.3 Objective

The purpose of this project is to help new people who come to get to know more about the surrounding area by showing a direction that can move so that it is easy to understand. This research was conducted to make a direct application.
