ABSTRACT

Data security can be done using cryptographic technique. This technique is not only for encrypting files with txt format but also for image format. One technique for data security is DES.

In order for the data in the Android system could be maintained securely and confidentiality, the application to encrypt data is needed. To open the encryption results, the Andorid application can also decrypt the results of the encrypted data.

Android applications with DES Algorithm are much better using the asynchrhonous type of programming where in this study the android applications are implemented with the DES mode CBC Algorithm.

Keyword: Cryptography, algorithm, DES Mode
