TITLE

abstract

- does the learning method of TEOFL really become interesting? any literature about it?
- many features, what else?
- integration between game and information system -> make easy the result?? -> get result quickly?? any proof?
- fast and good data management? any proof?

INTRODUCTION

- the relation between games and information system developed by the author was not clearly explained

LITERATURE REVIEW

- the literature review should contain more about existing/similar methods that was addressed by the author to resolve the research problem, instead of explaining technology/ Platforms that was used by the author e.g. android, website, mysql

RESEARCH METHODOLOGY

- the explanation of the research methodology is very rough and confusing, the author should work seriously on this section since it is the core of the contribution

IMPLEMENTATION

- figure 1. the Flow Diagram is lack of explanation, "lulus" term is not English vocabulary
- the author should distinguish between process business and data flow,
- discussing technical program function e.g. DownloadHandlerBuffer, UnityWebRequest but it's better explaining it in programmatic algorithm e.g. pseudocode. Otherwise, it would look total messy
- the author should differentiate between DESIGN and USER INTERFACE!, the screenshots are USER INTERFACE

- the discussion about questionnaire should be more interesting if it is split in different section e.g. DISCUSSION
- using a chart for visual representation would be more understandable, instead of tabular representation.

The conference chairs
