

CHAPTER 6

CONCLUSION

Conclusion of this project is the plant A is well grow than plant B, because plant B is withered in week 4 and dead after. This happen because plant B get direct rain thats make water nutrient inside bottle mess, also direct sunlight make plant leaf burn thats happen and plants withered.

Using automated rooftop help plants grow more healthy because roof makes rain not going through to the water nutrient, this will keep water nutrient stable and preserve plants condition from burned by sunlight. Using this project makes user no need stay close to the plants all day.
