CHAPTER 6
CONCLUSION

In this last chapter, it concluded that this project is succeed because from the result we get 86% for the detection that already done from 2 weeks ago. There are many factor that can affect the result of the detection for example the position of the face, accessories that we wear, lightning position and many more. This result can be done because this project using 20 pixels for the best size of the image.

Next research if you want to try the face recognition by using the CCTV, don't forget to get the best result of the video because the resolution can be the factor why we can't detect the face and don't forget to slowdown the video to get the better result of the similarity.
