ACKNOWLEDGEMENT

I would like to say thank you to Mam Heny and Mam Ninik for their patience, feedback, and guidance they have been giving me through the process of finishing my study. I am thankful for my mum for her support and for the pictures of my cute pugs she sent me. I am very grateful for my good friends—Yola, who was always there to help me including lending me her laptop. Yasy, who did not mind to answer my endless questions about making a thesis. Vani and Iwan, who I can always have fun with and have laughs together. I am also very grateful that I always have my best friends' love and support from my hometown—Maryam, Dewi, Jihan, and Felictya. My pug, Baby for her excitements whenever I come home on breaks. My late pug, Lassie who was always with me through thick and thin for eleven years. My late hamster sons, Ben and Michael who always boosted my mood by doing hamster things beside my desk when I was working on my paper. May their souls rest in pet heaven. Special thanks to my boyfriend Mark, who always convinced me that I could (and should) finish my study and for his patience listening to my happy, angry, cry, and moody times throughout my college years and I also thank him for always supporting me (except for when I wanted to get an elephant tattoo), literally and figuratively. I thank and love you all loads.

ABSTRACT

This research aims to acknowledge the respondents' attitudes towards greeting cards and find any correlations between their attitudes and age backgrounds. The method used for this research is a quantitative method by using a close-ended questionnaire, followed by IBM SPSS for the data analysis using Pearson correlation coefficient. This questionnaire was distributed to respondents who lived in Semarang, Indonesia. To distinguish the respondents' age backgrounds, 100 respondents from 4 different generations (Baby Boomer Generation, Generation X, Millennial Generation, and Generation Z) participated, with every 25 of them represented each of the generations. This research answered the research questions: 1. What are the respondents' attitudes towards greeting card?, 2. Is there any correlation between their attitudes and their age background? This study found that their attitude was positive, with an average mean of 3.67. Based on the correlation study using the Pearson product-moment correlation coefficient (PPMCC), the value found was 0.123, identified as positive. The correlation found between the attitudes and the age background moved in the same direction but since the value of PPMC (0.123) < correlation value of table r (0.195), the correlation found was not significant, resulting in a weak correlation. These results are expected to help entrepreneurs who are planning on starting a business related to greeting cards in the target market, advertisement, and designs of the product matters.

Keywords: greeting cards, correlation study, attitudes, perception, age background, Semarang, Indonesia.

ABSTRAK

Tujuan dari penelitian ini adalah untuk mengetahui sikap responden terhadap kartu ucapan dan apakah adanya korelasi antara sikap mereka dengan usia mereka. Metode yang digunakan dalam penelitian ini adalah metode kuantitatif menggunakan kuesioner tertutup, diikuti dengan penggunaan IBM SPSS untuk menganalisa data menggunakan Pearson korelasi koefisien. Kuesioner ini disebar pada responden yang tinggal di Semarang, Indonesia. Untuk membedakan usia responden, 100 responden dari 4 generasi berbeda (Generasi *Baby Boomer*, Generasi X, Generasi *Millennial*, dan Generasi Z) berpartisipasi, dimana setiap 25 orang diantara mereka mewakili salah satu generasi. Penelitian ini menjawab pertanyaan ilmiah: 1) Apa sikap responden terhadap kartu ucapan?, 2) Apakah ada korelasi antara sikap mereka dengan usia mereka? Penelitian ini menemukan sikap positif dengan nilai mean rata-rata sebesar 3,67. Berdasarkan studi korelasi menggunakan *Pearson product moment correlation coefficient* (PPMCC), nilai yang ditemukan sebesar 0,123 yang teridentifikasi positif. Korelasi antara sikap responden dengan usia mereka bergerak searah, namun dikarenakan nilai PPMCC (0,123) < nilai korelasi r tabel (0,195), korelasi yang ditemukan tidak signifikan, menyebabkan korelasi yang lemah. Hasil dari penelitian ini juga diharapkan membantu para wirausaha yang ingin memulai bisnis dalam bidang kartu ucapan, dalam hal mengetahui *target market*, pengiklanannya, dan desain dari kartu ucapan itu sendiri.

Kata kunci: kartu ucapan, studi korelasi, sikap, persepsi, latar belakang usia, Semarang, Indonesia.
