CHAPTER 1 INTRODUCTION Background of the Study People may get many advantages by going to a coffee shop. Coffee shops offer many facilities that can be used, such as comfortable places with air conditioner, and speedy Wi-Fi. The coffee shop industry is popular worldwide because coffee shops serve various purposes, such as chatting, meeting, eating, or studying (Lee et al., 2018). Therefore, people do not only enjoy the drink and the dessert, but also do their jobs there using the speedy Wi-Fi. By going to a coffee shop, people also can make new networking (Herlyana, 2012). People can start a conversation with the barista and ask anything about coffee or something else then try to make a close connection with them. People can also see and learn how the barista makes a cup of coffee, so people have ideas how the coffee is made. Besides the advantages, coffee shops also have their disadvantages (Herlyana, 2012). First, people who do not have anything in particular will hang out in the coffee shop to just chill and waste their time for nothing. The comfortable and cozy place makes people forget the time. Second, coffee shops make teenagers or people become consumptive. People waste their time if they do not do anything there but having chit-chat and hanging out. On average, people should pay around IDR 20,000 until IDR 35,000 when they want to buy a cup of coffee in a coffee
