## CHAPTER 4 <br> ANALYSIS AND DESIGN

### 4.1. Analysis

Process of converting images into text using the tesseract ocr library. But before processing the image, pre processing is carried out in order to improve image quality and increase the percentage of successful text conversion. The sample image to be processed must have good image quality so that the level of accuracy is higher. therefore we added a filter to solve this problem. The filters I use are grayscale, erosion and dilation depending on the image of the text, whether the text looks thick or looks too thin. so that the text is easier to detect which was thin and difficult to read, tesseract becomes easier to read This is also to prove my project whether the filter on the image affects the tesseract ocr making it easier or more difficult for tesseract to read the text.

### 4.2. Design

First we need to import the image that we will process then we show the image so we can see the image that we will process and we need to get the height and width of the image.

Illustration 4.2 : original image

To facilitate the work, Work in the process further in image processing, in the first stage Grayscaling process is carried out. This process changes the image with various colors into an 8 -bit image gray. The equations used are

$$
\text { Gray }=0,2989 * \mathrm{R}+0,5870 * \mathrm{G}+0,1140 * \mathrm{~B}
$$

Information :

R : The intensity value of the red color component

G: Green component intensity value intensitas

B : The intensity value of the blue component

This process is done by doing each pixel a color that has three color components (RGB).With the above equation, we get a color new which has a color component with intensity between 0 to 225 (this is because image is 8 bits so there are 28 colors or 225). and for the grayscale
process, it will start with repetitions as much as height and width and then we take the RGB color in the loop index. and in each pixel there is an index to 0 which is red index 1 is green and index 2 is blue. then to convert to grayscale we multiply by the formula above.the first step we have to get the RGB value per pixel I take the example of $10 \times 10$ pixels between 260.60 to 269.69 from the picture above, more precisely in the quotation marks area, to get the RGB value of each pixel I use the library pillow.

| 152,106,106 | 147,103,102 | 199,155,154 | 97,56,54 | 217,173,170 | 242,198,195 | 241,197,194 | 242,197,194 | 247,199,197 | 255,209,207 | 60 |

| 249,198,195 | 246,197,193 | 247,198,194 | 252,203,199 | 246,197,193 | 248,199,195 | 248,197,194 | 246,195,192 | 249,195,193 | 252,198,196 | 69 |
| 260 | 261 | 262 | 263 | 264 | 265 | 266 | 267 | 268 | 269 |  |

Illustration 4.3 : value from $260 \times 60$ to $269 \times 69$. pixels

After we get the pixel value, we enter it into the formula above the first example at pixel 260.60 the RGB value is $152,106,106$ if it is entered into the formula then:

$$
\text { Gray }=0,2989 * 152+0,5870 * 106+0,1140 * 106
$$

$45,43+62,22+12,08=119,73$

If you already get the grayscale value of the pixel which originally had 3 values, now it only has 1 value, so the new 260.60 pixel is $\underline{119.73}$ and repeated as many times as width x height. and the result will look like this :

| 119,73 | 116,01 | 144,09 | 67,96 | 185,79 | 210,78 | 209,77 | 210,07 | 213,08 | 222,48 | 60 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

| 90,01 | 106,81 | 157 | 66,78 | 59,96 | 86,15 | 168,85 | 215,85 | 213,86 | 217,16 | 63 |
| 112.79 | 109.15 | 238.89 | 60.16 | 182.15 | 217.14 | 215.86 | 209.87 | 212.17 | 209.88 | 64 |
| 134.86 | 126.15 | 167.15 | 86.16 | 188.86 | 214.86 | 211.87 | 212.17 | 215.88 | 210.89 | 65 |
| 187.86 | 183.86 | 205.86 | 168.86 | 202.86 | 215.86 | 210.87 | 215.17 | 217.88 | 208.89 | 66 |
| 216.87 | 212.86 | 219.87 | 215.86 | 210.87 | 215.87 | 210.17 | 213.88 | 215.89 | 208.89 | 67 |
| 214.17 | 207.87 | 207.17 | 213.87 | 210.17 | 212.71 | 209.17 | 209.88 | 212.89 | 212.89 | 68 |
| 212.88 | 211.17 | 212.17 | 217.16 | 211.17 | 213.17 | 211.88 | 209.88 | 210.89 | 213.89 | 69 |
|  |  |  |  |  |  |  |  |  |  |  |

Illustration 4.4 : value of the grayscaled image

After the above process is done, all pixels of the image will turn into a grayscale image, the image will be shown and saved in the directory and the image that will be displayed will be like this

Illustration 4.5 : grayscale image

So that the smaller the value of the grayscale it will show the color towards the darker and vice versa the greater the value indicates the direction of the light color

After getting grayscale, the next step is dilation and erosion, the use of this function depends on the image text. Dilation itself is the process of adding pixels to the boundaries of objects in the image, while erosion removes pixels at the boundaries of objects. The number of pixels added or removed from objects in an image depends on the size and shape of the styling elements used to process the image, if the text in the image is too thin we use erosion and if it is too thick we use dilation it looks reversed because we are using a grayscale image so the erosion is should scrape instead looks like thicken and otherwise. the first thing we have to do is we have to define a template space, this template space itself is like a brush, it is recommended to use odd values to have a midpoint, so that from around the midpoint we calculate. after we
determine the brush, we divide the brush value by 2 and round it down which is useful to find out where the starting position is.

For example, we have an10x10px image and we set the brush to be 3 , so 3 divided by 2 is 1.5 and rounded to 1 so we will start counting after the first pixel. so we start with the yellow square as the midpoint

|  |  |  |  |  |  |  |  |  |  |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
|  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |

Illustration 4.6 : example location of yellow square
and also we start from the width first so that the process goes to the right, not to the bottom. For the repetition itself, the template width will be reduced from the template space itself so it doesn't stop at the wide end but stops at the red square because the template space is 1 . and continue again from the yellow bottom box to the red bottom box again until it's finished

The first iteration is to define the path of the brush. and in that loop we repeat as many times as the brush, and above we set the brush to be 3 .

|  |  |  |  |  |  |  |  |  |  |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
|  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |

Illustration 4.7 : example locationof red square

|  |  |  |  |  |  |  |  |  |  |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
|  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |

Illustration 4.8 : example location of green box
so it will look like this, if the midpoint is yellow then there will be $3 \times 3$ repetitions and yellow is used as the midpoint of the repetition. so if it is applied to the calculation above it will be like this:

| 119,73 | 116,01 | 144,09 | 67,96 | 185,79 | 210,78 | 209,776 | 210,07 | 213,08 | 222,48 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 112,02 | 108 | 172 | 55,01 | 184,77 | 211,77 | 212,78 | 216,66 | 215,07 | 212,08 |
| 114,02 | 110,99 | 165,99 | 59,71 | 184,06 | 212,05 | 213,17 | 211,78 | 211,85 | 214,22 |
| 90,01 | 106,81 | 157 | 66,78 | 59,96 | 86,15 | 168,85 | 215,85 | 213,86 | 217,16 |
| 112.79 | 109.15 | 238.89 | 60.16 | 182.15 | 217.14 | 215.86 | 209.87 | 212.17 | 209.88 |
| 134.86 | 126.15 | 167.15 | 86.16 | 188.86 | 214.86 | 211.87 | 212.17 | 215.88 | 210.89 |
| 187.86 | 183.86 | 205.86 | 168.86 | 202.86 | 215.86 | 210.87 | 215.17 | 217.88 | 208.89 |
| 216.87 | 212.86 | 219.87 | 215.86 | 210.87 | 215.87 | 210.17 | 213.88 | 215.89 | 208.89 |
| 214.17 | 207.87 | 207.17 | 213.87 | 210.17 | 212.71 | 209.17 | 209.88 | 212.89 | 212.89 |
| 212.88 | 211.17 | 212.17 | 217.16 | 211.17 | 213.17 | 211.88 | 209.88 | 210.89 | 213.89 |

Illustration 4.9 : image pixel value 108is midpoint
its midpoint is yellow. what we do here is erosion so we will find the smallest value of the green box, smaller than 256 and greater than 0 . so if we calculate it will be like this the first is 119.73 greater than 0 and less than 256 then the minimum value now is 119.73 , next is 116.01 greater than 0 and less than 119.73 then the minimum value now is 116,01 . then 144.09 is greater than 0 but not less than the current minimum value, then the minimum value is still 116.01. and 112.02 is greater than 0 and is also smaller than the minimum value, so the current minimum value is 112.02 . 108 is less than the current minimum and greater than 0 then 108 is the minimum value. then $172,114.02,110.99$ and 165.99 none is smaller than the minimum value. then at midpoint still use the current minimum value of 108 . If we have got the minimum value in 1 brush template, we move the midpoint so that it will look like the image below, the
midpoint now has a value of 172 and look for the minimum value again in the of the previous brush template which is 3 .

| 119,73 | 116,01 | 144,09 | 67,96 | 185,79 | 210,78 | 209,776 | 210,07 | 213,08 | 222,48 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 112,02 | 108 | 172 | 55,01 | 184,77 | 211,77 | 212,78 | 216,66 | 215,07 | 212,08 |
| 114,02 | 110,99 | 165,99 | 59,71 | 184,06 | 212,05 | 213,17 | 211,78 | 211,85 | 214,22 |
| 90,01 | 106,81 | 157 | 66,78 | 59,96 | 86,15 | 168,85 | 215,85 | 213,86 | 217,16 |
| 112.79 | 109.15 | 238.89 | 60.16 | 182.15 | 217.14 | 215.86 | 209.87 | 212.17 | 209.88 |
| 134.86 | 126.15 | 167.15 | 86.16 | 188.86 | 214.86 | 211.87 | 212.17 | 215.88 | 210.89 |
| 187.86 | 183.86 | 205.86 | 168.86 | 202.86 | 215.86 | 210.87 | 215.17 | 217.88 | 208.89 |
| 216.87 | 212.86 | 219.87 | 215.86 | 210.87 | 215.87 | 210.17 | 213.88 | 215.89 | 208.89 |
| 214.17 | 207.87 | 207.17 | 213.87 | 210.17 | 212.71 | 209.17 | 209.88 | 212.89 | 212.89 |
| 212.88 | 211.17 | 212.17 | 217.16 | 211.17 | 213.17 | 211.88 | 209.88 | 210.89 | 213.89 |

Illustration 4.10 : image pixel value 172 as midpoint
We start from the first 116.01 is greater than 0 and less than 256 then the minimum value now is $116.01,114.09$ is not less than 116.01 then the minimum value is not replaced. further 67.96 is smaller than 114.09 then the minimum value now is 67.96 then 106 , and 172 is not less than 67.96 then the minimum value is now 67.96 then 55.01 is smaller than the current minimum value and greater than 0 then the current minimum value is 55.01 and then 110.99 ,
$165.99,59.71$ then the minimum value remains 55.01 and the midpoint is replaced with the minimum value i.e. 55.01then it will look like this :

| 119,73 | 116,01 | 144,09 | 67,96 | 185,79 | 210,78 | 209,776 | 210,07 | 213,08 | 222,48 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 112,02 | 108 | 55,01 | 55,01 | 184,77 | 211,77 | 212,78 | 216,66 | 215,07 | 212,08 |
| 114,02 | 110,99 | 165,99 | 59,71 | 184,06 | 212,05 | 213,17 | 211,78 | 211,85 | 214,22 |
| 90,01 | 106,81 | 157 | 66,78 | 59,96 | 86,15 | 168,85 | 215,85 | 213,86 | 217,16 |
| 112.79 | 109.15 | 238.89 | 60.16 | 182.15 | 217.14 | 215.86 | 209.87 | 212.17 | 209.88 |
| 134.86 | 126.15 | 167.15 | 86.16 | 188.86 | 214.86 | 211.87 | 212.17 | 215.88 | 210.89 |
| 187.86 | 183.86 | 205.86 | 168.86 | 202.86 | 215.86 | 210.87 | 215.17 | 217.88 | 208.89 |
| 216.87 | 212.86 | 219.87 | 215.86 | 210.87 | 215.87 | 210.17 | 213.88 | 215.89 | 208.89 |
| 214.17 | 207.87 | 207.17 | 213.87 | 210.17 | 212.71 | 209.17 | 209.88 | 212.89 | 212.89 |
| 212.88 | 211.17 | 212.17 | 217.16 | 211.17 | 213.17 | 211.88 | 209.88 | 210.89 | 213.89 |

Illustration 4.11 : image pixel minimum value
and so on until finished. when it's done it will look like this:

Illustration 4.12 : filtered image

The next filter is dilation. dilation itself is the opposite of erosion where if erosion is looking for a minimum value, dilation is looking for a maximum value, then it will look like this:

| 119,73 | 116,01 | 144,09 | 67,96 | 185,79 | 210,78 | 209,776 | 210,07 | 213,08 | 222,48 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 112,02 | 108 | 172 | 55,01 | 184,77 | 211,77 | 212,78 | 216,66 | 215,07 | 212,08 |
| 114,02 | 110,99 | 165,99 | 59,71 | 184,06 | 212,05 | 213,17 | 211,78 | 211,85 | 214,22 |
| 90,01 | 106,81 | 157 | 66,78 | 59,96 | 86,15 | 168,85 | 215,85 | 213,86 | 217,16 |
| 112.79 | 109.15 | 238.89 | 60.16 | 182.15 | 217.14 | 215.86 | 209.87 | 212.17 | 209.88 |
| 134.86 | 126.15 | 167.15 | 86.16 | 188.86 | 214.86 | 211.87 | 212.17 | 215.88 | 210.89 |
| 187.86 | 183.86 | 205.86 | 168.86 | 202.86 | 215.86 | 210.87 | 215.17 | 217.88 | 208.89 |
| 216.87 | 212.86 | 219.87 | 215.86 | 210.87 | 215.87 | 210.17 | 213.88 | 215.89 | 208.89 |
| 214.17 | 207.87 | 207.17 | 213.87 | 210.17 | 212.71 | 209.17 | 209.88 | 212.89 | 212.89 |
| 212.88 | 211.17 | 212.17 | 217.16 | 211.17 | 213.17 | 211.88 | 209.88 | 210.89 | 213.89 |

Illustration 4.13 : image pixel value 108 as midpoint
in dilation we look for the largest value that must be greater than the value of 0 the first is 119.73 greater than the value 0 then the maximum value now is 119.73 then 116.01 is not greater than the maximum value then the maximum value is fixed, no changed. next is 144.09 , 144.09 is greater than the current maximum value, then the current maximum value is shifted by 144.09 t then 112.02 and 108 are not greater than the maximum value, then the maximum value remains. the next value is 172 , and 172 is greater than the current maximum value, which is 144.09 , then the current maximum value is 172 . the next value is $114.02,110.99,165.99$ and none of that is greater than the value maximum then the current maximum value is 172 .
and then the value in the midpoint which was previously 108 is replaced with the maximum value where the maximum value is 172 . and it will look like this:

| 119,73 | 116,01 | 144,09 | 67,96 | 185,79 | 210,78 | 209,776 | 210,07 | 213,08 | 222,48 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 112,02 | 172 | 172 | 55,01 | 184,77 | 211,77 | 212,78 | 216,66 | 215,07 | 212,08 |
| 114,02 | 110,99 | 165,99 | 59,71 | 184,06 | 212,05 | 213,17 | 211,78 | 211,85 | 214,22 |
| 90,01 | 106,81 | 157 | 66,78 | 59,96 | 86,15 | 168,85 | 215,85 | 213,86 | 217,16 |
| 112.79 | 109.15 | 238.89 | 60.16 | 182.15 | 217.14 | 215.86 | 209.87 | 212.17 | 209.88 |
| 134.86 | 126.15 | 167.15 | 86.16 | 188.86 | 214.86 | 211.87 | 212.17 | 215.88 | 210.89 |
| 187.86 | 183.86 | 205.86 | 168.86 | 202.86 | 215.86 | 210.87 | 215.17 | 217.88 | 208.89 |
| 216.87 | 212.86 | 219.87 | 215.86 | 210.87 | 215.87 | 210.17 | 213.88 | 215.89 | 208.89 |
| 214.17 | 207.87 | 207.17 | 213.87 | 210.17 | 212.71 | 209.17 | 209.88 | 212.89 | 212.89 |
| 212.88 | 211.17 | 212.17 | 217.16 | 211.17 | 213.17 | 211.88 | 209.88 | 210.89 | 213.89 |

Illustration 4.14 : image pixel maximum value
and the same thing will be done until everything in the brush template gets the maximum value and the midpoint is replaced with that maximum value.
but based on the opinion that I received, it is better not to bother determining this image is given an erosion or dilation filter, so I decided to use the opening process. Opening is an erosion process followed by dilation. Opening is usually used to remove small objects to make the edges of the image smoother. Different from closing which runs by dilating the image first, after that the image that has been dilated will be eroded. I don't use dilation because my dataset is text so that if it is dilated, it will actually make the text overlap and make it more difficult to convert/detect. therefore I use the opening process, so the final process of my image will be grayscaled and then I will erosion after that the image that has been eroded I am dilated after that I just give it to tesseract for detection and conversion.
