2022**

## HALAMAN PENGESAHAN

Judul Tugas Akhir: : THE COMPARISON BETWEEN gRPC AND REST API PERFORMANCE IN COMMUNICATION SERVICES USING GO LANGUAGE

Diajukan oleh : Hans Erhanto

NIM : 17.K1.0028

Tanggal disetujui : 30 Juli 2022

Telah setujui oleh

Pembimbing : Hironimus Leong S.Kom., M.Kom.

Pengaji 1 : R. Setiawan Aji Nugroho S.T., MCompIT., Ph.D

Pengaji 2 : Y.b. Dwi Setianto S.T., M.Cs.

Pengaji 3 : Hironimus Leong S.Kom., M.Kom.

Pengaji 4 : Yonathan Purbo Santosa S.Kom., M.Sc

Pengaji 5 : Rosita Herawati S.T., M.I.T.

Pengaji 6 : Yulianto Tejo Putranto S.T., M.T.

Ketua Program Studi : Rosita Herawati S.T., M.I.T.

Dekan : Dr. Bernardinus Harnadi S.T., M.T.

## DECLARATION OF AUTHORSHIP

I, the undersigned:

Name : HANS ERHANTO

ID : 17.K1.0028

declare that this work, titled "The Comparison Between gRPC AND REST API Performance in Communication Service using Go Language", and the work presented in it is my own. I confirm that:

- 1 This work was done wholly or mainly while in candidature for a research degree at Soegijapranata Catholic University
- 2 Where any part of this thesis has previously been submitted for a degree or any other qualification at this University or any other institution, this has been clearly stated.
- 3 Where I have consulted the published work of others, this is always clearly attributed.
- 4 Where I have quoted from the work of others, the source is always given.
- 5 Except for such quotations, this work is entirely my own work.
- 6 I have acknowledged all main sources of help.
- 7 Where the work is based on work done by myself jointly with others, I have made clear exactly what was done by others and what I have contributed myself.

## **HALAMAN PERNYATAAN PUBLIKASI KARYA ILMIAH UNTUK KEPENTINGAN AKADEMIS**

Yang bertanda tangan dibawah ini:

Nama : Hans Erhanto

Program Studi : Teknik Informatika

Fakultas : Ilmu Komputer

Jenis Karya : Laporan Akhir

Menyetujui untuk memberikan kepada Universitas Katolik Soegijapranata Semarang Hak Bebas Royalti Nonekslusif atas karya ilmiah yang berjudul “The Comparison Between gRPC AND REST API Performance in Communication Service using Go Language” beserta perangkat yang ada (jika diperlukan). Dengan Hak Bebas Royalti Nonekslusif ini Universitas Katolik Soegijapranata berhak menyimpan, mengalihkan media/formatkan, mengelola dalam bentuk pangkalan data (database), merawat, dan mempublikasikan tugas akhir ini selama tetap mencantumkan nama saya sebagai penulis / pencipta dan sebagai pemilik Hak Cipta.

Demikian pernyataan ini saya buat dengan sebenarnya.

Semarang, July 21 2022

Hans Erhanto

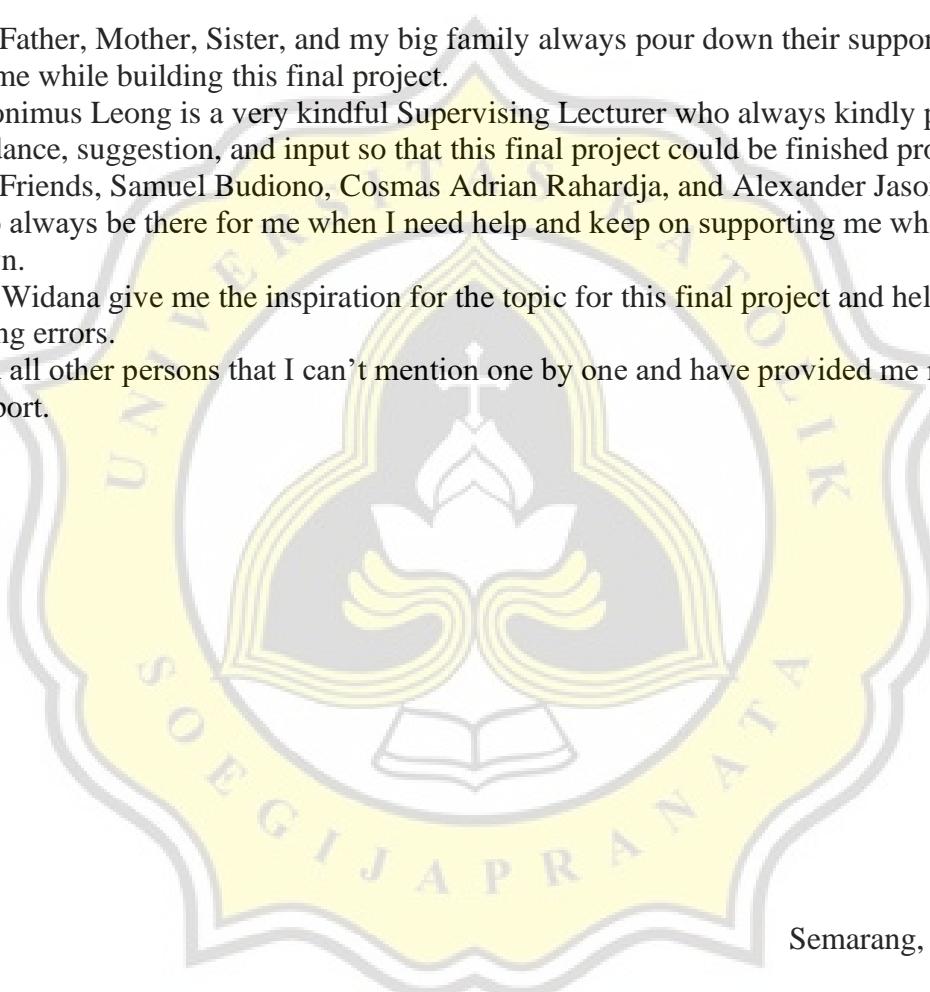

## **ACKNOWLEDGMENT**

First of all, I'd like to thank Jesus Christ because if not for His blessings, this final project is impossible to be this successful. The final project is a mandatory requirement to be a Bachelor of Computer Science in the Informatic Engineering Study Program at Soegijapranata Catholic University Semarang.

Along the journey and preparation of making this final project, I am blessed with the support and encouragement of people around me. Especially I'd like to express my gratitude to :

1. My Father, Mother, Sister, and my big family always pour down their support and prayer for me while building this final project.
2. Hironimus Leong is a very kindful Supervising Lecturer who always kindly provides guidance, suggestion, and input so that this final project could be finished properly
3. My Friends, Samuel Budiono, Cosmas Adrian Rahardja, and Alexander Jason Lauwren who always be there for me when I need help and keep on supporting me when I'm down.
4. Mr. Widana give me the inspiration for the topic for this final project and help me when facing errors.
5. And all other persons that I can't mention one by one and have provided me myriad support.

Semarang, July 21 2022

Hans Erhanto

## ABSTRACT

*In today's technological developments, many applications are found using protocol that are used to run them. The use of communication technology used by developers varies, from simple to complex buildings it. The efficiency of this protocol performance greatly affects the application used by the user later. if the resulting performance is slow and takes up a lot of memory, the application that is built will be slow and inefficient. So the developer must determine the use of protocol to work efficiently, whether to use REST API technology or gRPC. Both protocol have their respective advantages. The new gRPC is very popular for use in protocol used in the development of applications built by developers, because of its fast performance and less memory consumption. However, the REST API is also often used by developers because it has stable performance.*

*To find out better protocol performance, testing for both protocols were carried out. This test is done by hitting each protocol several times with multiple threads. in the use of each protocol will have an impact on CPU and memory usage. with the performance of each protocol will show which one is more in line with system needs. in this study, the authors want to compare the memory, and CPU resources used as well as the speed in transferring data that will be generated by the gRPC protocol and REST API in service transaction applications. The method that will be applied is the load test and stress test for each protocol. Data will be sent in varying amounts and for a certain period.*

*The final result of this research is the comparison of latency, CPU, and memory usage on REST API and gRPC. From the data obtained, it turns out that the gRPC protocol has an efficient performance than the REST API protocol. However, gRPC has a level of complexity in its creation compared to REST APIs. If developers want to make applications that are fast and have a short timeframe, then the REST API can be used for communication protocols between services. However, if you have a long time and want the application to run stable then gRPC can be used in making applications.*

*Keyword:* gRPC, REST API, latency, performance
