DECLARATION OF AUTHORSHIP

I, the undersigned:

Name : Wahono Soesantio

ID : 18.K1.0045

Declare that this work, titled "Comparing Random Forest Algorithm and Support Vector Machine in predicting the level of satisfaction with flights", and the work presented in it is my own. I confirm that:

- 1 This work was done wholly or mainly while in candidature for a research degree at Soegijapranata Catholic University
- 2 Where any part of this thesis has previously been submitted for a degree or any other qualification at this University or any other institution, this has been clearly stated.
- 3 Where I have consulted the published work of others, this is always clearly attributed.
- 4 Where I have quoted from the work of others, the source is always given.
- 5 Except for such quotations, this work is entirely my own work.
- 6 I have acknowledged all main sources of help.
- 7 Where the work is based on work done by myself jointly with others, I have made clear exactly what was done by others and what I have contributed myself.

ACKNOWLEDGMENT

First of all, I thank God, Jesus Christ, who has allowed me to write a thesis proposal so far, because of his grace I can live healthily until now even in the Covid-19 pandemic situation

I have received a myriad of support, advice, and assistance throughout this document writing. I would like to thank my supervisors Hironimus Leong S. Kom., M. Kom. for formulating this topic. I would also like to thank my friend for guiding me with advice to finish this document.

I would like to thank my family and friends for giving me ceaseless love, support, and advice throughout my study at Soegijapranata Catholic University. You gave me a great escape to rest my mind from my thesis.

For all 2018 Informatics Engineering friends who have accompanied and supported during the lecture period until the writing of this thesis was completed.

Finally, I would like to thank everybody important to the successful realization of this undergraduate thesis. This undergraduate thesis is far from perfect, but it is expected that it will be useful not only for the researcher but also for the readers. For this reason, Constructive thoughtful suggestions and critics are welcomed.

ABSTRACT

This study aims to find out which method is better and more effective so that it can be seen the difference between the two algorithms in predicting the level of passenger satisfaction with public services on the plane which will be displayed using a graph.

For the completion process, what I did was try each algorithm, the first thing I did was to try the random forest algorithm then when I tried it, I kept looking for the TP, TN, FP, FN values to generate prediction scores, accuracy, recall, f-1 scores. then compared with the support vector machine algorithm with more or less the same steps by looking for a true positive, true negative, false negative, false positive then looking for predictive value, accuracy, recall, the f-1 score then displayed on a graph to see which one is better. Both algorithms using a cross-validation split for split data which aims to divide the data into training and testing data and make it easier to calculate accuracy. For the use of split data used with a comparison of 70% training data and 30% testing data from the whole data.

The final result can be seen from the graph of each algorithm that has shown the prediction value, recall, precision, f-1 score and from there it can be concluded which method is better and the differences from each existing algorithm. To get the accuracy results obtained from the determination of the confusion matrix in the form of TP, TN, FP, and FN.
