

CHAPTER 6

CONCLUSION

I can draw the following conclusions from smart clothesline:

1. The four sensors can run according to the predefined parameters.
2. The response of the roof if the rain has been determined for 3 seconds will close and open
3. Determining the effective fuzzy algorithm for the system Category method using fuzzy logic method. The fourth data collected by the sensors is sent to the Arduino which is divided into two categories: open and closed. The specified data is masked and the results are entered into the specified rules.
