TITLE: Examining the Adoption of Mobile Payment Service: Expectation Confirmation Model with Trust

AUTHORS: Albertus Widianoro, Bernardinus Harnadi and Hendra Prasetya

----- Overall evaluation -----

Below are my comments:

1. In the introduction, please discuss e-payment/m-payment in Indonesia context. I found there are many studies related to e-payment/m-payment adoption in Indonesia setting, which you never discussed. It is important to articulate the research gaps clearly in the Introduction section.
2. Why did you need to combine ECM with trust?
3. The rationale of the hypotheses should be improved. Please include m-payment context when developing the hypotheses.
4. Please rewrite the methodology section. It should include the following: instrument development, data collection procedure, data analysis method.
5. The value of loading factors, AVE, CR, CA can be combined into a single table.
6. Please add a discussion and implication section. In the current form, you just wrote your results/findings.
7. Please add limitation and future research in the conclusion section.
