ABSTRACT

Reservation hotel is an activity in which a guest came to the hotel for booking a room type and to stay in the room that has been booked. Booking is done by the guest hotel online. The hotel is in the visitor in the provision of a place of residence of a temporary nature and within a certain time for the necessary visitors. For those who want to stay in a hotel, for example, there are seminars, and vacations and the person is from another area, for example, local and foreign people. The web-based of hotel room reservation system is built using PHP programming and SQL by the database.

During the pandemic, booking hotels are refunded, because many employees are layoffs or stay at home temporarily. The conclusion results are Research has successfully devised a hotel room reservation system.

With being Hotel Room Reservation System it can then provide information about data-type rooms that are empty or fully booked. When fully booked by the date for booking a hotel room, search for the date that you want.
