

CHAPTER VI

CONCLUSION

In the project the web-based Hotel Reservation System is the following function:

1. In the design of the hotel reservation system, hotel guests can reserve rooms in advance and more efficiently than type rooms reserved by other guests. Guests come to the hotel to reserve a room
1. Users can create hotel rooms based on the type of room and facilities they want before reserving a room with a guest.
2. Hotel guests can make hotel reservations with the reservation of check-in dates and available hotel room types.
3. This web-based reservation system is beneficial for hotel guests in terms of faster efficiency time so that hotel guests do not need to come directly to the hotel to make a reservation for the hotel.
