Integrity Flags

0 Integrity Flags for Review

No suspicious text manipulations found.

Our system's algorithms look deeply at a document for any inconsistencies that would set it apart from a normal submission. If we notice something strange, we flag it for you to review.

A Flag is not necessarily an indicator of a problem. However, we'd recommend you focus your attention there for further review.

Para-ovarian Cyst, will it cause infertility ?

Objective :

1 This study aimed to evaluate the effect of Para ovarian on unexplained infertility. The goal is to confirm women's infertility without any need of infertility treatment after removing the para ovarian cyst.

Method :

A 5 years Analytic Observational Retrospective study was conducted in Anugerah Women & Children hospital of 70 unexplained infertility patients. The first group of patients who has < 5 years of unexplained infertility and the second group was > 5 year infertility. The surgery was done laparoscopically. The patients were followed up with a telemedicine system to inform the fertile day and analysed with χ^2 or Fisher's and Kruskal-Wallis.

Results : In this study, The average age of patients is 32.6 years. A para ovarian cyst that arises from walfian duct called a para fimbrial cyst occurred most frequently with 74.3 % happening in patients with more than five-year infertility. The mean of the para-ovarian cyst was 4.3 cm and all were managed by laparoscopically with $p < 3\text{cm}$ (p-value 0.027 95% CI); moreover, the patients with cysts >5 cm were also statistically proven. (p-value 0.016%, 95% CI).

1 Conclusion : It would be grossly incorrect since it is known and believed that many unknown factors are related to unexplained infertility. Laparoscopy enucleation surgery is technically easier and not time consuming, it should be considered in every case of unexplained infertility.
