

## CHAPTER 6

### CONCLUSION

The conclusion of this project is:

1. Web Server are successfully built with 2 web server using Apache2 web server in Ubuntu desktop.
2. Load balance server using NginX with least connection algorithm has been installed on Ubuntu desktop.
3. Web server database with MySQL already installed in Ubuntu desktop.
4. Load Balance server can direct client request into one of two web server with least connection algorithm.

The suggestion for further development for this project is to increase the number of web servers in use and add something to increase the load balancing capabilities.
