Abstract:	This study aims to investigate the behavioral differences in the acceptance of MOOCs and E-learning. The study employs combining models TAM and ECM to reveal user's behavior in using MOOCs and E-learning. In accessing these learning systems, e-learning users are more mandatory in accessing the learning contents than MOOCs. The eight latent variables derived from reviewing previous related literatures including information quality, self-efficacy, perceived ease of use, perceived usefulness, attitude, confirmation, satisfaction, and behavioral intention are employed to reveal the behavioral differences in using these systems. This study also employs type of learning systems (MOOCs and E-learning) as difference variable. The questionnaires are delivered to e-learning and MOOCs users in high school and university and the supplemental questionnaires are delivered to employers and entrepreneurs as MOOC users. There are 706 questionnaire data collected and examined in statistically manner using smart-PLS to prove the hypotheses in proposed model. Several analyses including the structural model and hypotheses, MGA, and IPMA are employed in this study. This study has findings on the accepted of all hypotheses on the model in adoption of MOOCs technology. For the adoption of e-learning technology all hypotheses on the model are accepted excluding the hypothesis of information quality which has positive direct effect on the perceived usefulness. The difference values on the MGA result reveals that there is difference on the correlation of between information quality and perceived usefulness, perceived usefulness and attitude, confirmation and satisfaction, and attitude and behavioral intention. IPMA analysis reveals the difference on importance and performance among indicators of construct of the model and serves interesting insights into the role of indicators of construct and their relevance for managerial implications.

Question	Response
To complete your submission you must select a statement which best reflects the availability of your research data/code. IMPORTANT: this statement will be published alongside your article. If you have selected "Other", the explanation text will be published verbatim in your article (online and in the PDF). (If you have not shared data/code and wish to do so, you can still return to Attach Files. Sharing or referencing research data and code helps other researchers to evaluate your findings, and increases trust in your article. Find a list of supported data repositories in Author Resources, including the free-to-use multidisciplinary open Mendeley Data Repository.)	Data will be made available on request.
Free Preprint Service Do you want to share your research early as a preprint? Preprints allow for open access to and citations of your research prior to publication. Computers in Human Behavior Reports offers a free service to post your paper on SSRN, an open access research repository, when your paper enters peer review. Once on SSRN, your paper will benefit from early registration with a DOI and early dissemination that facilitates collaboration and early citations. It will be available free to read regardless of the publication decision made by the journal. This will have no effect on the editorial process or outcome with the journal. Please consult the SSRN Terms of Use and FAQs.	YES, I want to share my research early and openly as a preprint.

December 2, 2023

Editor in Chief of Computers in Human Behavior Reports

Dear Professor Matthieu Guitton, Ph.D.,

Please find a copy of our manuscript entitled "Investigating the Behavioral Differences in the Acceptance of MOOCs and E-learning Technology". The submission of this manuscript has been approved by all authors and never been published before. This project reported in this manuscript is funded by the Ministry of Education, Culture, Research and Technology of Indonesia.

This study employs TAM and ECM to predict the acceptance of MOOCs and e-learning in one proposed model. This study conduct analysis in three stages (MOOCs, e-learning, and mix of MOOCs and e-learning). This study reports the analyses of behavioral difference in using MOOCs and e-learning in one integrated data using structural model, multi group (MGA), and importance-performance matrix analyses (IPMA). The difference values on the MGA result reveals the difference on the correlation values of variables in the model and IPMA analysis reveals the difference on importance and performance among indicators of construct of the model. The work reported in this manuscript fall within the scope of the journal and can be of potential interest to Computers in Human Behavior Reports readers.

For the purpose of reviewing our manuscript, we would like to suggest several names.

1. Prof. Dr. Achmad Nizar Hidayanto, S.Kom., M.Kom.

Investigating the Behavioral Differences in the Acceptance of MOOCs and E-learning Technology

Abstract

This study aims to investigate the behavioral differences in the acceptance of MOOCs and E-learning. The study employs combining models TAM and ECM to reveal user's behavior in using MOOCs and E-learning. In accessing these learning systems, e-learning users are more mandatory in accessing the learning contents than MOOCs. The eight latent variables derived from reviewing previous related literatures including information quality, self-efficacy, perceived ease of use, perceived usefulness, attitude, confirmation, satisfaction, and behavioral intention are employed to reveal the behavioral differences in using these systems. This study also employs type of learning systems (MOOCs and E-learning) as difference variable. The questionnaires are delivered to e-learning and MOOCs users in high school and university and the supplemental questionnaires are delivered to employers and entrepreneurs as MOOC users. There are 706 questionnaire data collected and examined in statistically manner using smart-PLS to prove the hypotheses in proposed model. Several analyses including the structural model and hypotheses, MGA, and IPMA are employed in this study. This study has findings on the accepted of all hypotheses on the model in adoption of MOOCs technology. For the adoption of e-learning technology all hypotheses on the model are accepted excluding the hypothesis of information quality which has positive direct effect on the perceived usefulness. The difference values on the MGA result reveals that there is difference on the correlation of between information quality and perceived usefulness, perceived usefulness and attitude, confirmation and satisfaction, and attitude and behavioral intention. IPMA analysis reveals the difference on importance and performance among indicators of construct of the model and serves interesting insights into the role of indicators of construct and their relevance for managerial implications.

Keywords: E-learning, MOOCs, Behavioral Difference, TAM, ECM.

1. Introduction

Education has undergone substantial transformation in recent decades, especially since the emergence of revolutionary information and communications technologies. Online learning is a form of transformation on learning including Massive Open Online Courses (MOOCs) and e-learning. These two types of learning provide wider access to knowledge and education to the people.

MOOCs are a type of online course that is open to the peoples and can be accessed by anyone without geographic restrictions or significant access costs (N. et al. 2023). Meanwhile, e-learning encompasses various forms of learning that utilize technology, including online university/school courses, corporate training, and customized self-education (Allen and Seaman, 2017). These two types of learning systems have the potential to change the way people learn. The fundamental differences in accessibility, structure, and participation in these systems may influence the behavior and acceptance in using the systems by users.

This study aims to understand behavioral differences in the acceptance of MOOCs and e-learning. These differences can serve valuable insights for online learning developers, students, teachers and mentors, education division on government, and others who have concern in gaining education of people. The research question that arises is: "What factors influence individual preferences in using MOOCs and e-

learning, and how are the differences of behaviors arise from the factors can give insight for managerial implication?"

This study investigates behavioral differences in the acceptance of MOOCs and e-learning employing a combination of TAM and ECM to reveal user behavior and its differences in using MOOCs and e-learning. The respondents of this study come from MOOCs and e-learning users (student, employee, and entrepreneur). The newness of this study come from the analysis of behavioral difference of MOOCs and e-learning users in one integrated data using structural model, MGA, and IPMA analyses. The difference values on the MGA result reveals the difference on the correlation values of variables in the model and IPMA analysis reveals the difference on importance and performance among indicators of construct of the model.

This study is delivered in five sections. The first section, introduction introduces the background, purpose, research questions, and contribution of this study. The second section introduces review of literatures to propose the research model and hypotheses. The third section introduces the methodology of the research. The fourth section present finding the research and their discussion. The fifth section summarizes the findings and serve theoretical and practical implication of the study.

2. Proposed Model and Hypotheses

Information Quality, Perceived Ease of Use, Perceived Usefulness, Attitude, and Behavioral Intention

The relation of perceived usefulness, perceived ease of use, and attitude are the essence of TAM (Hu et al., 2022; Raza et al., 2020; Widiantoro and Harnadi, 2019; Prasetya and Harnadi, 2019; Wu and Chen, 2017; Khaled et. Al, 2015). Wu and Chen (2017) define perceived usefulness as the extent to which and individual perceives that MOOCs and e-learning can be a driving force towards attaining learning objectives. They also define perceived ease of use as the extent to which an individual perceives that using learning systems are free of effort. Attitude also defines by Wu and Chen (2017) as the degree to which an individual perceives a positive or negative feeling related to learning systems. Adapt to the study conducted by Harnadi (2017), behavioral intention can be defined as the extent to which a person intends to continue to use learning systems in the future.

On the studies conducted by Widiantoro and Harnadi (2019) and Wu and Chen (2017), perceived ease of use has positive direct effect on perceived usefulness. Perceived ease of use also has positive direct effect on attitude (Hu et al., 2022; Widiantoro and Harnadi, 2019; Raza et.al., 2021). Other studies conducted by Hu et al., 2022; Raza et al. (2021), Wu and Chen (2017), and Khaled et. al (2015) stated that perceived usefulness has positive direct effect on attitude.

Furthermore, perceived usefulness, perceived ease of use, and attitude have positive direct effect on behavioral intention to use learning systems (Raza et al., 2021; Dai et.al., 2020; Widiantoro and Harnadi, 2019; Wu and Chen, 2017; Khaled et al., 2015). Perceived usefulness and perceived ease of use have direct effect on behavioral intention to use learning systems (Raza et al., 2021; Khaled et al., 2015). Furthermore, attitude is prominent variable on TAM and it is a significant determinant on behavioral intention in using learning systems (Dai et.al., 2020; Widiantoro and Harnadi, 2019; Wu and Chen, 2017).

Information Quality is significant factor on study of e-learning systems. Mulhem et al. (2020) and Abdurrahman et al. (2019), and Alharthi et al. (2017) conduct research on e-learning quality and stated that Information Quality has positive direct effect on Perceived ease of use (Mulhem et al., 2020;

Abdurrahman et al., 2019, and Alharthi et al., 2017). Information Quality has also positive direct effect on Perceived usefulness (Mulhem et al., 2020).

According to these reviews, authors propose the hypotheses:

H1: Information Quality has positive direct effect on Perceived ease of use

H2: Information Quality has positive direct effect on Perceived usefulness

H3: Perceived ease of use has positive direct effect on Perceived usefulness

H4: Perceived ease of use has positive direct effect on Attitude

H5: Perceived usefulness has positive direct effect on Attitude

H6: Attitude has positive direct effect on Behavioral Intention

H7: Perceived usefulness has positive direct effect on Behavioral Intention

Perceived Usefulness, Confirmation, Satisfaction, and Behavioral Intention

ECM is interesting model on user adoption of learning system. Several researchers conducted study in this context using ECM model (Harnadi et.al, 2022b; Prasetya et al., 2022, Prasetya et al., 2021; Hadji and Degoulet, 2016; Kumar and Natarajan, 2020; Alam et al., 2022; Shiau et al., 2020). The studies on the user acceptance to use learning systems (Harnadi et.al, 2022b; Prasetya et al., 2022, Prasetya et al., 2021; Prasetya et al., 2019; Hadji and Degoulet, 2016; Kumar and Natarajan, 2020; Alam et al., 2022; Shiau et al., 2020) state that confirmation has positive direct effect on satisfaction. Confirmation also has positive direct effect on perceived usefulness (Shiau et al., 2020; Harnadi et al. 2022b). Furthermore, perceived usefulness has positive direct effect on Satisfaction (Prasetya, et al., 2021; Hadji and Degoulet, 2016; Kumar and Natarajan, 2020; Alam et al., 2022; Shiau et al., 2020) and satisfaction has positive direct effect on behavioral intention (Harnadi et.al., 2022b; Prasetya et al., 2022; Prasetya et al., 2021; Prasetya et al., 2019; Hadji and Degoulet, 2016; Kumar and Natarajan, 2020; Alam et al., 2022).

According to these reviews, authors propose the hypotheses:

H8: Confirmation has positive direct effect on Perceived usefulness

H9: Perceived usefulness has positive direct effect on Satisfaction

H10: Confirmation has positive direct effect on Satisfaction

H11: Satisfaction has positive direct effect on Behavioral Intention

Self-efficacy, Perceived Ease of Use, Confirmation, and Satisfaction

Harnadi et al. (2022a) and Prasetya et al. (2021) define self-efficacy as the individual's believe in their ability to access academic content of learning systems. Self-efficacy is the prominent variable on the study of user intention to use learning systems. Self-efficacy has positive direct effect on perceived ease of use (Alassafi, 2022). According to Harnadi et.al. (2022a) and Prasetya et al. (2021), self-efficacy also has positive direct effect on satisfaction. Other researchers (Shiau et al., 2020); Shiau et al. (2020); Harnadi et al. (2020b) also stated that self-efficacy also has positive direct effect on confirmation.

According to these reviews, authors propose the hypotheses:

H12: Self-efficacy has positive direct effect on Perceived Ease of use

H13: Self-efficacy has positive direct effect on Confirmation

H14: Self-efficacy has positive direct effect on Satisfaction

This study proposes theoretical model on Figure 1 based on the review of several related literatures.

Figure 1. Proposed Theoretical Model

3. Methodology

This study employs TAM and ECM to reveal the behavioral differences of users in using MOOCs and E-learning. Previous related studies in the technology acceptance especially on MOOCs and E-Learning are reviewed to obtain salient variables and propose hypotheses and model to investigate the behavioral differences towards in using these two learning technologies. Respondents from students, employers, and entrepreneurs participated in the study. There are 749 questionnaires collected and 43 of them are dropped for reason of incomplete answers and outliers. Finally, the 706 questionnaires are used as sample data to examine the proposed hypotheses and models. Firstly, the sample data must pass the internal consistency, reliability, and convergent validity tests on all constructs and items in the model. This process is conducted to ensure the properness of the sample data to be used in the structural model and hypotheses testing. The testing of the model and hypotheses has resulted in the accepting or not the hypotheses. Furthermore, multi-group analysis for MOOCs and E-learning is conducted to examine the difference of acceptance of these two learning technologies. This analysis can reveal the behavioral differences of users in using the technologies and serve the theoretical and practical implication. In addition, the practical implication can be detailed for every significant indicator in the model with IPMA analysis to serve useful insights for learning managers, teachers, and government who have concern in improvement of learning and education in their institutions.

4. Findings and Discussion,

The finding on respondent's characteristic is presented on Table 1. There are age, gender, education, status, technology used, and user experience in using learning technology. The respondents on Table 1

represent the characteristic of: most of them are student (92.8%) and university student (83.4%); half of them (54.1%) are female, almost half of them (43.1%) are MOOCs users, and half of them (51.8%) have experienced in using learning system for at least one year.

Table 1. Profile of Respondents

Age			Gender

Sat -> BI	0.284	6.100**	3.504				0.063

Note(s): n = 1,000 subsample; **p value < 0.01, *p value < 0.05 (one-tailed test)

According to Sarstedt et.al (2021), VIF values are above 3 indicate of collinearity among variables. Table 4 shows most of VIF values are below 3, except for the regression of attitude and behavioral intention (3,219) and satisfaction and behavioral intention (3,504). However, the two VIF values are very close to 3, it is concluded that the collinearity among these variables is not critical issue in the structural model. This is in accordance with Sarstedt et.al (2021).

The f2 is the effect size value of each path model. The value has the criteria of: low for 0.02 and above, medium for 0.15 and above, and large for 0.35 and above. (Hair et al., 2018; Cohen, 1988). Meanwhile, According to Hair et al. (2019), Q2 the value at 0, 0.25, and 0.50 express the small, medium, and huge predictive relevance of the path model. Q2 values on Table 4 stated that the path model has a huge predictive relevance.

Furthermore, based on Table 4, the final model for this study is presented on Figure 1. All of hypotheses on the model are accepted. Information quality has positive direct effect on perceived ease of use (β=0.394, p<0.001) and perceived usefulness (β=0,292, p<0.001). These results indicate that H1 and H2 are accepted. Perceived ease of use has positive direct effect on perceived usefulness (β=0.476, p<0.001) and attitude (β=0.488, p<0.001). Therefore, H3 and H4 are accepted. Perceived usefulness has positive direct effect on attitude (β=0.384, p<0.001), behavioral intention (β=0.139, p<0.05), confirmation (β=0.478, p<0.001), and satisfaction (β=0.188, p<0.001) indicating H5, H7, H8, and H9 are accepted. Attitude has direct effect on behavioral intention (β=0.432, p<0.001), therefore H6 is accepted. Furthermore, confirmation has positive direct effect on satisfaction (β=0.515, p<0.001) and satisfaction also has direct effect on behavioral intention (β=0.285, p<0.001). This result indicates that H10 and H11 are accepted. Finally, self-efficacy has direct effect on perceived ease of use (β=0.459, p<0.001), confirmation (β=0.351, p<0.001), and satisfaction (β=0.276, p<0.001). These results indicate that H12, H13, and H14 are accepted. Figure 2 presents the final model.
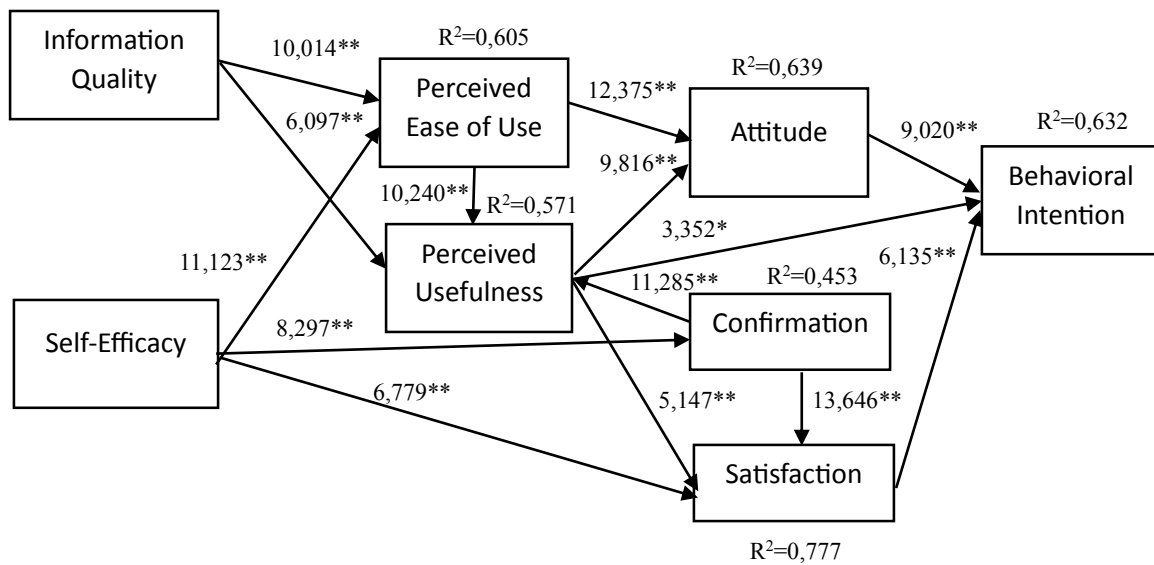

Figure 2. Final model

Multi Group Analysis

According to Cheah et al. (2020), multi-group analysis (MGA) is conducted to reveal the heterogeneity on user behavior. Multi-group analysis in this study is employed to analyze the difference of MOOCs and e-learning users in any correlation on the model and the result presents on Table 5. There are the discernible differences (mean values of MOOCs > e-learning) in the correlation between information quality and perceived usefulness, perceived usefulness and attitude, and attitude and behavioral intention. Other result, the correlation of confirmation and satisfaction has also discernible differences with the mean values of e-learning > MOOCs).

Table 5. Multi-group analysis for MOOCs and E-learning

Structural Model and Hypotheses Testing for MOOCs and E-learning

This study separates the sample data into two user categories, MOOCs and e-learning users and each of them are analyzed using the structural model and hypotheses testing (Table 6). All hypotheses on the MOOCs model are accepted. All hypotheses on the e-learning model are accepted excluding hypothesis H2, self-efficacy has no significant direct effect on perceived usefulness.

Table 6. Structural Model and Hypotheses Testing for MOOCs and E-learning

Importance-Performance Analysis

According to Ringle (2016), importance-performance matrix analysis (IPMA) of the model can suggest interesting insights into the role of indicators of construct and their relevance for managerial implications (Ringle, 2016). The result of importance-performance analysis presents on Table 7. The construct Att2 is more important and has higher performance than Att1 and Att3. The construct Conf3 is more important and has higher performance than conf1 and conf2. The construct PEOU3 is more important than PEOU1 and PEOU2 and PEOU2 have higher performance than PEOU1 and PEOU3. Furthermore, the construct InfQuality1 is more important than InfQuality2 and InfQuality3 and InfQuality2 has higher performance than InfQuality1 and InfQuality3. The construct PU2 is more important than PU1 and PU3 and PU3 has higher performance than PU1 and PU2. The construct SE3 is more important and has higher performance than SE1 and SE2. The last, the construct Sat1 and Sat2 are more important than Sat3 and Sat2 has higher performance than Sat1 and Sat3.

Table 7. Importance-performance analysis of behavioral Intention

Construct - Indicators	Importance	Performance
Attitude	0,436	68,929
Att1	0,143	68,378

5. Conclusions

This study reveals the behavioral differences in the acceptance of MOOCs and e-learning. The questionnaires from MOOCs and e-learning users are used to test the proposed model. The proposed model employs fourteen hypotheses and the results on the final model reveal all hypotheses all accepted. The separate analyses on MOOCs and e-learning acceptances and multi-group analysis on the correlation between constructs reveal the difference and no behavioral differences in using MOOCs and e-learning technology. The other interesting results come from the importance performance matrix analysis (IPMA) of the indicators on the model and their relevance for managerial implications.

The theoretical implication of this study is derived from the final model on accepted and no accepted the hypotheses. Firstly, from the findings and discussion section, this study concludes that TAM and ECM can be employed together to predict the acceptance of MOOCs and e-learning in one proposed model. On the TAM stage, perceived usefulness, perceived ease of use, attitude, and behavioral intention is proven the prominent variables on the learning technology, MOOCs, and e-learning acceptances. ECM stage on the final model also has same results, perceived useful, confirmation, satisfaction, and behavioral intention is proven the prominent variables. The effect of self-efficacy on TAM and ECM is presented on the significantly effect of self-efficacy on perceived ease of use, confirmation, and satisfaction. Meanwhile the effect of information quality on perceived ease of use and perceived usefulness is significant for learning technology acceptance (the mix of MOOCs and e-learning), but it has different results on the analyses of MOOCs and e-learning acceptances. The difference of effect is on the significant effect of information quality on perceived usefulness in the MOOCs model and no significant effect on e-learning model. MGA also reveal that the correlation of between information quality and perceived usefulness, perceived usefulness and attitude, confirmation and satisfaction, and attitude and behavioral intention have significant difference results. The correlations of information quality and perceived usefulness, perceived usefulness and attitude, and attitude and behavioral intention have

differences in the mean values of MOOCs and they are greater than e-learning. For the correlation of confirmation and satisfaction, the mean value of MOOCs is lower than e-learning.

The practical implications of this study are insights for education institutions as which provide the system to students or users, MOOCs and e-learning developers, teachers and mentors, and others who have concern in gaining MOOCs and e-learning acceptance. Firstly, the result of IPMA on the indicators construct of the model stated that the relevancy to user's needs of the information available on the online learning systems is more important than their easy access and their relevancy with current trends. In the context of performance, the easy access of information is higher than their relevancy to user's need and current trends. The result indicates that teachers and mentors must serve students with the information that relevant to their need and ascertain the information that are ease to access. Secondly, it is more important to make users feel confident in accessing academic content of learning systems than other belief. Thirdly, the feeling of users in clear and easy use of their interaction with the online system is more important than their experience in easily use or become proficient in using online system. On the other hand, becoming proficient in using online system has higher performance than having clear and easy interaction or just feel easy. It indicates that learning system developers must serve users with clear and easy interaction with the system and teachers and mentors must train users to make them proficient with the system. Fourthly, increasing user's work/study effectiveness as a result of using online learning system is more important than improving their work/study performance or helping them in turning the academic material into knowledge. Furthermore, user's feeling in no difficulty of understanding the academic material and turning it into knowledge has higher performance than increasing user's work/study effectiveness or improving their work/study performance. This result indicates that learning system developers must enhance the system to gain user's work/study effectiveness as outcome in using the system. Teachers and mentors also can serve the users with the good learning material to help them in turning the learning material into knowledge. Fifthly, how to transfer beliefs that using online learning system is a good idea for user's study/work is important This result indicates that online learning developers and teachers and mentors must serve users with many things to evoke positive attitude regarding their experience in using online learning system. Sixthly, the final confirmation of users in their experience in using online learning systems is interesting. The confirmation about their most expectation in using online learning service has been confirmed that it is more important than just their expectations or more. This result indicates that online learning developers and teachers and mentors must know the most expectation and it is confirmed by users or not. Seventhly, it is important to satisfy the users in using online learning system. The feeling on their decision to use the online learning system is the right thing, and it is more important and has higher performance than just they satisfy. This result indicates that online learning developers and teachers and mentors must keep user's decision to use the system by setting the system menu and service better.

Questionnaires

InfQty1: The information available on online learning system (MOOC or E-learning) is relevant to my needs.
InfQty2: The information available on online learning system (MOOC or E-learning) is easy to access
InfQty3: The information available on online learning system (MOOC or E-learning) is relevant to current trends in online learning
Conf1: This online learning service on MOOC or E-learning met my expectations
Conf2: My experience using online learning system (MOOC or E-learning) was more than I expected
Conf3: Overall, most of my expectations in using the online learning service on MOOC or E-learning has been confirmed.
Sat1: My experience using the online learning system (MOOC or E-learning) was quite satisfying
Sat2: I feel my decision to use the online learning system (MOOC or E-learning) was the right thing.
Sat3: Overall, I am satisfied with the use of online learning system (MOOC or E-learning)
PU1: I believe the use of online learning system (MOOC or E-learning) improve my study/work performance.
PU2: Using the online learning system (MOOC or E-learning) increases my study/work effectiveness.
PU3: By using the online learning system (MOOC or E-learning), I have no difficulty understanding the material and turning it into knowledge.
SE1: I can study using online learning system (MOOC or E-learning) even though nothing helps
SE2: I can learn using online learning system (MOOC or E-learning) just by using online help as a reference
SE3: I am quite confident in my ability to learn using online learning system (MOOC or E-learning)
Att1: Using online learning system (MOOC or E-learning) is a good thing
Att2: I believe that using online learning system (MOOC or E-learning) is a good idea for my studies/work.
Att3: I like understanding/expertise about many things on the online learning system (MOOC or E-learning)
PEOU1: Learning to use online learning system (MOOC or E-learning) is easy.
PEOU2: It is very easy to become proficient using online learning system (MOOC or E-learning)
PEOU3: Interaction with the online learning system (MOOC or E-learning) feels clear and easy to understand
BI1: I intend to continue using the online learning system (MOOC or E-learning) in the future, at least for now.
BI2: I intend to continue using the online learning system (MOOC or E-learning) in the future.
BI3: I will use the online learning system (MOOC or E-learning) in the future.

Investigating the Behavioral Differences in the Acceptance of MOOCs and E-learning Technology

Dear Mr. Harnadi,

Thank you for submitting your manuscript to Computers in Human Behavior Reports.

I have completed my evaluation of your manuscript. The reviewers recommend reconsideration of your manuscript following revision. I invite you to resubmit your manuscript after addressing the comments below. Please resubmit your revised manuscript by **Feb 16, 2024**.

When revising your manuscript, please consider all issues mentioned in the reviewers' comments carefully: please outline in a cover letter every change made in response to their comments and provide suitable rebuttals for any comments not addressed. Please note that your revised submission may need to be re-reviewed.

To submit your revised manuscript, please log in as an author at https://www.editorialmanager.com/chbr/, and navigate to the "Submissions Needing Revision" folder under the Author Main Menu.

Research Elements (optional)
This journal encourages you to share research objects - including your raw data, methods, protocols, software, hardware and more – which support your original research article in a Research Elements journal. Research Elements are open access, multidisciplinary, peer-reviewed journals which make the objects associated with your research more discoverable, trustworthy and promote replicability and reproducibility. As open access journals, there may be an Article Publishing Charge if your paper is accepted for publication. Find out more about the Research Elements journals at https://www.elsevier.com/authors/tools-and-resources/research-elements-journals?dgcid=ec_em_research_elements_email.

Computers in Human Behavior Reports values your contribution and I look forward to receiving your revised manuscript.

Kind regards,
Dorin Stanciu, Ph.D.
Editor-in-Chief
Computers in Human Behavior Reports

Editor and Reviewer Comments:

Reviewer's Responses to Questions

Note: In order to effectively convey your recommendations for improvement to the author(s), and help editors make well-informed and efficient decisions, we ask you to answer the following specific questions about the manuscript and provide additional suggestions where appropriate.

1. Are the objectives and the rationale of the study clearly stated?

Please provide suggestions to the author(s) on how to improve the clarity of the objectives and rationale of the study. Please number each suggestion so that author(s) can more easily respond.

Reviewer #1: 1. Why are the two theories are applied to investigate behavorial differences for the MOOCs and e-learning? Usually if we compare, we should use the same theoretical framework.
2. In the introduction, the authors stated the aim of the study is to understand behavioral differences in the acceptance of MOOCs and e-learning. What is the theoretical contribution for doing this?   What can we do after knowing the differences?
3. One of the research questions is "what factors influence...."? , obviously it is not align with the title.

Reviewer #2: 1. Authors should explore current issues that lies within educators/teachers/tutors and the current condition in education - which should link with contribution made in the conclusion section.
2. Research background - What about practices worldwide and chosen location? (please refer comments made for methodology).

2. If applicable, is the application/theory/method/study reported in sufficient detail to allow for its replicability and/or reproducibility?

Please provide suggestions to the author(s) on how to improve the replicability/reproducibility of their study. Please number each suggestion so that the author(s) can more easily respond.

Reviewer #1: Mark as appropriate with an X:
Yes [] No [X] N/A []
Provide further comments here:
1. Please explain separately, why the TAM and ECM are chosen and then combined.
2. Also, there are many variables examined in the technology acceptance literature, why the extended variables in this study are chosen? Rationales were needed.

Reviewer #2: Mark as appropriate with an X:
Yes [] No [X] N/A []
Provide further comments here:
Authors should explain theory utilised for the research - why chose TAM and ECM?; how does the theory relevant to the highlighted issues and objectives of the research?

3. If applicable, are statistical analyses, controls, sampling mechanism, and statistical reporting (e.g., P-values, CIs, effect sizes) appropriate and well described?

Please clearly indicate if the manuscript requires additional peer review by a statistician. Kindly provide suggestions to the author(s) on how to improve the statistical analyses, controls, sampling mechanism, or statistical reporting. Please number each suggestion so that the author(s) can more easily respond.

Reviewer #1: Mark as appropriate with an X:
Yes [] No [X] N/A []
Provide further comments here:
The method section is too short and lacks specification. Please refer to published SSCI journal articles or Scopus journal ariticles for the details of the method section.

Reviewer #2: Mark as appropriate with an X:
Yes [] No [X] N/A []
Provide further comments here:
1. Methodology explanation is not thorough enough. Please revised according to steps taken.
2. Location of the research is not clear - which country?; characteristic of chosen institutions?

---

4. Could the manuscript benefit from additional tables or figures, or from improving or removing (some of the) existing ones?

Please provide specific suggestions for improvements, removals, or additions of figures or tables. Please number each suggestion so that author(s) can more easily respond.

Reviewer #1: Tables and figures are acceptable, but please revise tables to align with the APA format.

Reviewer #2: No.

---

5. If applicable, are the interpretation of results and study conclusions supported by the data?

Please provide suggestions (if needed) to the author(s) on how to improve, tone down, or expand the study interpretations/conclusions. Please number each suggestion so that the author(s) can more easily respond.

Reviewer #1: Mark as appropriate with an X:
Yes [X] No [] N/A []
Provide further comments here:

Reviewer #2: Mark as appropriate with an X:
Yes [] No [X] N/A []
Provide further comments here:
Please refer comments made for the research objectives and rationale.

---

6. Have the authors clearly emphasized the strengths of their study/theory/methods/argument?

Please provide suggestions to the author(s) on how to better emphasize the strengths of their study. Please number each suggestion so that the author(s) can more easily respond.

Reviewer #1: Strengths (theoretical and practical contribution) , limitations of the study and suggestions for further study need to be explicitly elaborated.

Reviewer #2: Authors should strengthen up the write-up on issues, theory utilised, methods and conclusion.

---

7. Have the authors clearly stated the limitations of their study/theory/methods/argument?

Please list the limitations that the author(s) need to add or emphasize. Please number each limitation so that author(s) can more easily respond.

Reviewer #1: No.

Reviewer #2: Need revision according to comments made on research objectives and rationale, theory utilised and methodology.

---

8. Does the manuscript structure, flow or writing need improving (e.g., the addition of subheadings, shortening of text, reorganization of sections, or moving details from one section to another)?

Please provide suggestions to the author(s) on how to improve the manuscript structure and flow. Please number each suggestion so that author(s) can more easily respond.

Reviewer #1: In the introduction section, I suggest the authors use subtitles such as "problem statement", "research gap", "aim of the study" to guide readers' thinking. Using subtitles will make the manuscript easy to follow.
The method section needs to be improved.

Reviewer #2: No.

---

9. Could the manuscript benefit from language editing?

Reviewer #1: No

Reviewer #2: Yes

Reviewer #1: This field is optional. If you have any additional suggestions beyond those relevant to the questions above, please number and list them here.

Reviewer #2: This field is optional. If you have any additional suggestions beyond those relevant to the questions above, please number and list them here.

Investigating the Behavioral Differences in the Acceptance of MOOCs and E-learning Technology

Dear Mr. Harnadi,

The PDF for your above referenced manuscript has been built and requires your approval. If you have already approved the PDF of your submission, this e-mail can be ignored.

Please review the PDF carefully, before approving it, to confirm it appears as you expect and is free of any errors. Once approved, no further changes can be made.

To approve the PDF, please:

* Log into Editorial Manager as an author at: https://www.editorialmanager.com/chbr/.

* Click on the folder 'Submissions Waiting for Author's Approval' to view and approve your submission PDF. You may need to click on 'Action Links' to expand your Action Links menu.

* Confirm you have read and agree with Elsevier's Ethics in Publishing statement by ticking the relevant box.

Once the above steps are complete, you will receive an e-mail confirming receipt of your submission.

We look forward to receiving your approval.

Kind regards,
Computers in Human Behavior Reports

Investigating the Behavioral Differences in the Acceptance of MOOCs and E-learning Technology

Reviewer's Responses to Questions

Note: In order to effectively convey your recommendations for improvement to the author(s), and help editors make well-informed and efficient decisions, we ask you to answer the following specific questions about the manuscript and provide additional suggestions where appropriate.

1. Are the objectives and the rationale of the study clearly stated?

Please provide suggestions to the author(s) on how to improve the clarity of the objectives and rationale of the study. Please number each suggestion so that author(s) can more easily respond.

Reviewer #1:

1. Why are the two theories are applied to investigate behavorial differences for the MOOCs and e-learning? Usually if we compare, we should use the same theoretical framework.

Response: We have added argument (in italic sentence) based on the literature studies on learning system to support the utilization of two theories:

The related previous studies (Hsu, Chen, & Ting, 2018; Janelli, 2018; Zhang et al., 2016) employed various theoretical frameworks to investigated the distinct nature of these learning environments. Hsu, Chen, & Ting (2018) and Zhang et al. (2016) used TAM and Social Support Theory to reveal factors which affect user behavior in using MOOCs and e-learning differently. Other study by Janelli (2018) used several theoretical frameworks naming behaviorism, cognitivism, constructivism, digital media theory, active learning theory to understand the unique aspects of MOOCs and e-learning. The applicability of different theoretical frameworks for investigating MOOCs and e-learning can reveal the complexity and diversity of these online learning environments. Every theory serves unique insights to reveal different behaviors, motivations, and engagements of learners in using these learning environments.

This study investigates behavioral differences in the acceptance of MOOCs and e-learning employing a combination of TAM and ECM to reveal user behavior and its differences in using MOOCs and e-learning. *TAM is a robust theoretical framework to understand user behavior towards information technology (Al-Adwan, 2020; Valverde-Berrocoso, 2020; Davis, 1989). ECM is a framework to understand the satisfaction and continued intention of the user when using a service or product (Lee et al., 2023; Rekha et al., 2023; Oliver, 1980). Integrating TAM and ECM in this study will reveal not only the initial acceptance of MOOCs and e-learning but also factors influencing continued use of these learning environments.*

2. In the introduction, the authors stated the aim of the study is to understand behavorial differences in the acceptance of MOOCs and e-learning. What is the theoretical contribution for doing this？What can we do after knowing the differences?

Response: We have added argument (in italic sentence) to explain the theoretical contribution on Section #1. Introduction:

This study aims to understand behavioral differences in the acceptance of MOOCs and e-learning. *These differences can serve as theoretical contributions to learning systems. Two theories, TAM and ECM are employed simultaneously to predict the acceptance of MOOCs and e-learning either as unified learning system or as separate entities including MOOCs or e-learning. The effect of each factor on the theory is investigated to explore their contributions to the acceptance of the learning system.*

3. One of the research questions is "what factors influence...."? , obviously it is not align with the title.

Response: We have revised the research question on Section#1. Introduction:

The research question that arises is: "*How is the acceptance of online learning environments (MOOCs and e-learning), and how do behavioral differences in acceptance of MOOCs and e-learning provide insight into managerial implications?*"

: 1. Authors should explore current issues that lies within educators/teachers/tutors and the current condition in education - which should link with contribution made in the conclusion section.

Response: We have added argument (in italic sentence) to explain the current issues:

The differences can also serve valuable insights for online learning developers, students, teachers and mentors, education division on government, and others who have concern in gaining education of people. *Students and Teacher have difference perceptions about the effectiveness of leaning systems (Khulal et al., 2023). On the students' perception, Khulal et al. (2023) stated that the issues of leaning efficiency come from the standardization of learning subjects and the assessments. Besides that, on the teachers' perception, the issues of learning efficiency come from the lack of teacher' technical skill and their expertise on the subjects. Finally, the difficulty in managing all course-related activities by learning administrators is also an issue of effectiveness*.

2. Research background - What about practices worldwide and chosen location? (please refer comments made for methodology).

Response: We have added argument (in italic sentence) on Section#1. Introduction:

MOOCs are a type of online course that is open to the peoples and can be accessed by anyone without geographic restrictions or significant access costs (N. et al. 2023). *The online survey was conducted in the United States in November 2023 of 1,241 respondents (©Global Market Insights (2023) stated that the level of use of MOOC services from various online education platforms shows significant growth. Based on this survey, 1241 respondents with an age range of 18 to 64 years, Rosetta Stone as a MOOC service provider shared 61% of respondents, followed by Babbel with 51%, and LinkedIn Learning with 45%. Other providers such as Duolingo, Khan Academy, and Coursera are also recorded as having a significant percentage of users, at 43%, 39%, and 34% respectively.*
Meanwhile, e-learning encompasses various forms of learning that utilize technology, including online university/school courses, corporate training, and customized self-education (Allen and Seaman, 2017). *E-learning technology has become a very significant economic sector with a variety of technologies that support online learning. The growth of mobile e-learning represents a shift in how people choose to learn for flexibility of access. Based on the world market report of e-learning usage (@Statista (2023)), LMS (Learning Management System) has a market of $38,700.7 million, mobile e-learning is worth $46,005.7 million, Rapid e-learning is worth $4,885.1 million, and virtual classroom is worth $34,325.1 million. Meanwhile, the world e-learning market based on region, Asian including Indonesia has a market of $77,147.4 million.*

---

2. If applicable, is the application/theory/method/study reported in sufficient detail to allow for its replicability and/or reproducibility?

Please provide suggestions to the author(s) on how to improve the replicability/reproducibility of their study. Please number each suggestion so that the author(s) can more easily respond.

: Mark as appropriate with an X:
Yes [] No [X] N/A []
Provide further comments here:
1. Please explain separately, why the TAM and ECM are chosen and then combined.

Response: We have added argument on #Section 2. Proposed Model and Hypotheses:

The related previous researches on e-learning and MOOCs are shown on Table 1 and 2. Table 1 and 2 summarize previous research employing extended TAM or ECM to predict e-learning and MOOCs acceptance. From Table 1 it is seen that the variable Seff-efficacy was employed on extended TAM or ECM by Prasetya et al. (2021), Alharthi et al. (2017), Alassafi. (2022) and the variables Information Quality was also employed on extended TAM or ECM by Prasetya et al. (2021), Alassafi. (2022).

Table 1. Previous Research on e-learning technology acceptance

(Table 1 ……..)

Table 2 summarizes previous research on MOOCs acceptance with TAM and ECM. It seen on Table 2, The variable self-efficacy was employed on extended TAM or ECM by Al-adwan (2020), Harnadi et al. (2022b), Hsu et al. (2018), and Rekha et al. (2023). Lee et al. (2023) and Dai et al. (2020) employed Information Quality on extended ECM.

Table 2. Previous Research on MOOC technology acceptance

(Table 2 ……..)

From Table 1 and 2 it is seen that the TAM and ECM are important models on E-learning and MOOCs. From the Tables 2 it is that Hsu et al (2018) conducted study on competing platforms of E-learning and MOOCs using TAM.

2. Also, there are many variables examined in the technology acceptance literature, why the extended variables in this study are chosen? Rationales were needed.

Reviewer #2: Mark as appropriate with an X:
Yes [] No [X] N/A []
Provide further comments here:
Authors should explain theory utilised for the research - why chose TAM and ECM?; how does the theory relevant to the highlighted issues and objectives of the research?

Response: We have added argument on #Section 2. Proposed Model and Hypotheses:

The related previous researches on e-learning and MOOCs are shown on Table 1 and 2. Table 1 and 2 summarize previous research employing extended TAM or ECM to predict e-learning and MOOCs acceptance. From Table 1 it is seen that the variable Seff-efficacy was employed on extended TAM or ECM by Prasetya et al. (2021), Alharthi et al. (2017), Alassafi. (2022) and the variables Information Quality was also employed on extended TAM or ECM by Prasetya et al. (2021), Alassafi. (2022).

Table 1. Previous Research on e-learning technology acceptance

(Table 1 ……..)

Table 2 summarizes previous research on MOOCs acceptance with TAM and ECM. It seen on Table 2, The variable self-efficacy was employed on extended TAM or ECM by Al-adwan (2020), Harnadi et al. 4. Could the manuscript benefit from additional tables or figures, or from improving or removing (some of the) existing ones?

Please provide specific suggestions for improvements, removals, or additions of figures or tables. Please number each suggestion so that author(s) can more easily respond.

Tables and figures are acceptable, but please revise tables to align with the APA format.

Response: We have revised the tables according to APA format

No.

Response: We have revised the tables according to APA format

---

5. If applicable, are the interpretation of results and study conclusions supported by the data?

Please provide suggestions (if needed) to the author(s) on how to improve, tone down, or expand the study interpretations/conclusions. Please number each suggestion so that the author(s) can more easily respond.

: Mark as appropriate with an X:
Yes [X] No [] N/A []
Provide further comments here:

Response: Thank you very much for your thoughtful review of our manuscript. We appreciate the time and effort that the reviewer has dedicated to providing your valuable feedback on our manuscript.

Reviewer #2: Mark as appropriate with an X:
Yes [] No [X] N/A []
Provide further comments here:
Please refer comments made for the research objectives and rationale.
Response: We have added arguments to revise: research objective and rationale (it is the same response to no #1)

---

6. Have the authors clearly emphasized the strengths of their study/theory/methods/argument?

Please provide suggestions to the author(s) on how to better emphasize the strengths of their study. Please number each suggestion so that the author(s) can more easily respond.

Reviewer #1: Strengths (theoretical and practical contribution) , limitations of the study and suggestions for further study need to be explicitly elaborated.

Response: We have added arguments to revise: the issues (it is the same response to no #1); theory utilised (it is the same response to no #2); and methodology (it is the same response to no #3)

Reviewer #2: Authors should strengthen up the write-up on issues, theory utilised, methods and conclusion.

Response: We have added arguments to revise: the issues (it is the same response to no #1); theory utilised (it is the same response to no #2); and methodology (it is the same response to no #3)

---

7. Have the authors clearly stated the limitations of their study/theory/methods/argument?

Please list the limitations that the author(s) need to add or emphasize. Please number each limitation so that author(s) can more easily respond.

Reviewer #1: No.

Response: We have added arguments to revise: research objective and rationale (it is the same response to no #1); theory utilised (it is the same response to no #2); and methodology (it is the same response to no #3)

Reviewer #2: Need revision according to comments made on research objectives and rationale, theory utilised and methodology.

Response: We have added arguments to revise: research objective and rationale (it is the same response to no #1); theory utilised (it is the same response to no #2); and methodology (it is the same response to no #3)

---

8. Does the manuscript structure, flow or writing need improving (e.g., the addition of subheadings, shortening of text, reorganization of sections, or moving details from one section to another)?

Please provide suggestions to the author(s) on how to improve the manuscript structure and flow. Please number each suggestion so that author(s) can more easily respond.

In the introduction section, I suggest the authors use subtitles such as "problem statement", "research gap", "aim of the study" to guide readers' thinking. Using subtitles will make the manuscript easy to follow.
The method section needs to be improved.

Response: We have added subtitles: Problem Statement; Research Gap; and Purpose of the Study on Section #1. Introduction. We have revised also the method (it is the same response to no #3)

Reviewer #2: No.

Response: We have added subtitles: Problem Statement; Research Gap; and Purpose of the Study on Section #1. Introduction. We have revised also the method (it is the same response to no #3)

---

9. Could the manuscript benefit from language editing?

Reviewer #1: No

Response: Thank you very much for your thoughtful review of our manuscript. We appreciate the time and effort that the reviewer has dedicated to providing your valuable feedback on our manuscript.

Reviewer #2: Yes

Response: Thank you very much for your thoughtful review of our manuscript. We appreciate the time and effort that the reviewer has dedicated to providing your valuable feedback on our manuscript.

Investigating the Behavioral Differences in the Acceptance of MOOCs and E-learning Technology

Abstract

This study aims to investigate the behavioral differences in the acceptance of MOOCs and E-learning. The study employs combining models TAM and ECM to reveal user's behavior in using MOOCs and E-learning. In accessing these learning systems, e-learning users are more mandatory in accessing the learning contents than MOOCs. The eight latent variables derived from reviewing previous related literatures including information quality, self-efficacy, perceived ease of use, perceived usefulness, attitude, confirmation, satisfaction, and behavioral intention are employed to reveal the behavioral differences in using these systems. This study also employs type of learning systems (MOOCs and E-learning) as difference variable. The respondents of this study are MOOCs and e-learning users in Indonesia. The online questionnaires are delivered to e-learning and MOOCs users in high school and university and the supplemental questionnaires are delivered to employers and entrepreneurs as MOOC users. There are 706 questionnaire data collected and examined in statistically manner using smart-PLS to prove the hypotheses in proposed model. Several analyses including the structural model and hypotheses, MGA, and IPMA are employed in this study. This study has findings on the accepted of all hypotheses on the model in adoption of MOOCs technology. For the adoption of e-learning technology all hypotheses on the model are accepted excluding the hypothesis of information quality which has positive direct effect on the perceived usefulness. The difference values on the MGA result reveals that there is difference on the correlation of between information quality and perceived usefulness, perceived usefulness and attitude, confirmation and satisfaction, and attitude and behavioral intention. IPMA analysis reveals the difference on importance and performance among indicators of construct of the model and serves interesting insights into the role of indicators of construct and their relevance for managerial implications.

Keywords: E-learning, MOOCs, Behavioral Difference, TAM, ECM.

1. Introduction

Education has undergone substantial transformation in recent decades, especially since the emergence of revolutionary information and communications technologies. Online learning is a form of transformation on learning including Massive Open Online Courses (MOOCs) and e-learning. These two types of learning provide wider access to knowledge and education to the people.

MOOCs are a type of online course that is open to the peoples and can be accessed by anyone without geographic restrictions or significant access costs (N. et al. 2023). The online survey was conducted in the United States in November 2023 of 1,241 respondents (©Global Market Insights (2023) stated that the level of use of MOOC services from various online education platforms shows significant growth. Based on this survey, 1241 respondents with an age range of 18 to 64 years, Rosetta Stone as a MOOC service provider shared 61% of respondents, followed by Babbel with 51%, and LinkedIn Learning with 45%. Other providers such as Duolingo, Khan Academy, and Coursera are also recorded as having a significant percentage of users, at 43%, 39%, and 34% respectively.

Meanwhile, e-learning encompasses various forms of learning that utilize technology, including online university/school courses, corporate training, and customized self-education (Allen and Seaman, 2017). E-learning technology has become a very significant economic sector with a variety of technologies that support online learning. The growth of mobile e-learning represents a shift in how people choose to learn

for flexibility of access. Based on the world market report of e-learning usage (@Statista (2023)), LMS (Learning Management System) has a market of $38,700.7 million, mobile e-learning is worth $46,005.7 million, Rapid e-learning is worth $4,885.1 million, and virtual classroom is worth $34,325.1 million. Meanwhile, the world e-learning market based on region, Asian including Indonesia has a market of $77,147.4 million.

Problem Statement

The two types of learning systems MOOCs and E-learning have the potential to change the way people learn. The fundamental differences in accessibility, structure, and participation in these systems may influence the behavior and acceptance in using the systems by users.

The related previous studies (Hsu, Chen, & Ting, 2018; Janelli, 2018; Zhang *et al*., 2016) employed various theoretical frameworks to investigated the distinct nature of these learning environments. Hsu, Chen, & Ting (2018) and Zhang *et al*. (2016) used TAM and Social Support Theory to reveal factors which affect user behavior in using MOOCs and e-learning differently. Other study by Janelli (2018) used several theoretical frameworks naming behaviorism, cognitivism, constructivism, digital media theory, active learning theory to understand the unique aspects of MOOCs and e-learning. The applicability of different theoretical frameworks for investigating MOOCs and e-learning can reveal the complexity and diversity of these online learning environments. Every theory serves unique insights to reveal different behaviors, motivations, and engagements of learners in using these learning environments.

This study investigates behavioral differences in the acceptance of MOOCs and e-learning employing a combination of TAM and ECM to reveal user behavior and its differences in using MOOCs and e-learning. TAM is a robust theoretical framework to understand user behavior towards information technology (Al-Adwan, 2020; Valverde-Berrocoso, 2020; Davis, 1989). ECM is a framework to understand the satisfaction and continued intention of the user when using a service or product (Lee et al., 2023; Rekha et al., 2023; Oliver, 1980). Integrating TAM and ECM in this study will reveal not only the initial acceptance of MOOCs and e-learning but also factors influencing continued use of these learning environments.

Purpose of the Study

This study aims to understand behavioral differences in the acceptance of MOOCs and e-learning. These differences can serve as theoretical contributions to learning systems. Two theories, TAM and ECM are employed simultaneously to predict the acceptance of MOOCs and e-learning either as unified learning system or as separate entities including MOOCs or e-learning. The effect of each factor on the theory is investigated to explore their contributions to the acceptance of the learning system. The differences can also serve valuable insights for online learning developers, students, teachers and mentors, education division on government, and others who have concern in gaining education of people. Students and Teacher have difference perceptions about the effectiveness of leaning systems (N. et al., 2023). On the students' perception, N. et al. (2023) stated that the issues of leaning efficiency come from the standardization of learning subjects and the assessments. Besides that, on the teachers' perception, the issues of learning efficiency come from the lack of teacher' technical skill and their expertise on the subjects. Finally, the difficulty in managing all course-related activities by learning administrators is also an issue of effectiveness.

The research question that arises is: "How is the acceptance of online learning environments (MOOCs and e-learning), and how do behavioral differences in acceptance of MOOCs and e-learning provide

insight into managerial implications?" The respondents of this study come from MOOCs and e-learning users (student, employee, and entrepreneur) in Indonesia.

Research Gap

The newness of this study come from the analysis of behavioral difference of MOOCs and e-learning users in one integrated data using structural model, MGA, and IPMA analyses. The difference values on the MGA result reveals the difference on the correlation values of variables in the model and IPMA analysis reveals the difference on importance and performance among indicators of construct of the model.

This study is delivered in five sections. The first section, introduction introduces the background, purpose, research questions, and contribution of this study. The second section introduces review of literatures to propose the research model and hypotheses. The third section introduces the methodology of the research. The fourth section present finding the research and their discussion. The fifth section summarizes the findings and serve theoretical and practical implication of the study.

2. Proposed Model and Hypotheses

The related previous researches on e-learning and MOOCs are shown on Table 1 and 2. Table 1 and 2 summarize previous research employing extended TAM or ECM to predict e-learning and MOOCs acceptance. From Table 1 it is seen that the variable Seff-efficacy was employed on extended TAM or ECM by Prasetya et al. (2021), Alharthi et al. (2017), Alassafi. (2022), and Widiantoro, et al. (2022) and the variables Information Quality was also employed on extended TAM or ECM by Prasetya et al. (2021), Alassafi. (2022), and Widiantoro, et al. (2022).

Table 1. Previous Research on e-learning technology acceptance

Model/Theory	Causal effect on BI	Significant variables	Data Collection	Reference
Voluntariness difference in acceptance based on TAM	Attitude	Perceived Ease of Use, Perceive Usefulness, Attitude, BI	Quantitative online survey	Widiantoro & Harnadi (2019)
Smartphone acceptance for learning	Perceive Usefulness	Perceive Usefulness, BI	Quantitative online survey	Prasetya & Harnadi (2019)
Extending ECM	Satisfaction	Information Quality, Self-efficacy, Confirmation, Perceive Usefulness, Satisfaction, BI	Quantitative online survey	Prasetya et al. (2021)
Satisfaction and continued intention based on ECM	Satisfaction	Confirmation, Perceive Usefulness, Satisfaction, System Quality, Service Quality, BI	Quantitative online survey	Prasetya et al. (2022)
E-learning intention of students with anxiety	Attitude	Perceive Usefulness, Perceived Ease of Use, Attitude, BI	Quantitative online survey	Hu et al. (2022)
Empirical assessment of the factors that	Satisfaction, Self-efficacy	Satisfaction, Self-efficacy, Resistance to Use, BI	Quantitative online survey	Alharthi et al. (2017)

Model/Theory	Causal effect on BI	Significant variables	Data Collection	Reference
influence instructors to use E-learning				
E-learning intention material using TAM	Perceive Usefulness, Academic Motivation	Self-efficacy, Knowledge Quality, Perceive Usefulness, Perceived Ease of Use, Technology Fit, Academic Motivation, BI.	Quantitative online survey	Alassafi. (2022)
E-learning intention material using ECM	Self-efficacy Satisfaction	Self-efficacy, Information Quality, Confirmation, Perceived Usefulness, Satisfaction, System Quality, BI	Quantitative online survey	Widiantoro, et al. (2022)

Table 2 summarizes previous research on MOOCs acceptance with TAM and ECM. It seen on Table 2, The variable self-efficacy was employed on extended TAM or ECM by Al-adwan (2020), Harnadi et al. (2022b), Hsu et al. (2018), and Rekha et al. (2023). Lee et al. (2023) and Dai et al. (2020) employed Information Quality on extended ECM.

Table 2. Previous Research on MOOC technology acceptance

Model/Theory	Causal effect on BI	Significant variables	Data Collection	Reference
ECM to predict students' intention to continue online business courses	Satisfaction, Psychological Safety	Task Skill, Perceived Enjoyment, Task Challenge, Satisfaction, Confirmation, Perceived Usefulness, BI	Quantitative online survey	Alam et al. (2022)
The drivers and barriers to MOOCs acceptance on TAM based	Perceived Usefulness, Perceived Ease of Use	Self-efficacy, Perceived Usefulness, Perceived Ease of Use, BI	Quantitative online survey	Al-adwan (2020)

User Acceptance of MOOCs based on ECM	Satisfaction, Perceived Usefulness	Self-efficacy, Satisfaction, Confirmation, Perceived Usefulness, BI	Quantitative online survey	Harnadi et al. (2022b)
Social support theory and TAM on competing	Attitude	Self-efficacy, Perceived Usefulness,	Quantitative online survey	Hsu et al. (2018)

Model/Theory	Causal effect on BI	Significant variables	Data Collection	Reference
platforms MOOCs and E-learning		Perceived Ease of Use, Attitide, BI		
MOOCs continuance intention with ECM	Satisfaction, Perceived Usefulness, Perceived Enjoyment	Satisfaction, Confirmation, Perceived Usefulness, Perceived Enjoyment, BI	Quantitative online survey	Khaled et al. (2015)
Quality Factors that influence the continuance intention to use MOOCs	Satisfaction, Perceived Usefulness	Information Quality, Satisfaction, Confirmation, Perceived Usefulness, BI	Quantitative online survey	Lee et al. (2023)
Students' continuance intention to use MOOCs	Self-efficacy, Satisfaction	Self-efficacy, Perceived Usefulness, Satisfaction, Confirmation, Enjoyment, BI	Quantitative online survey	Rekha et al. (2023)
Integrating TAM and task technology fit (TTF) to predict continuance intention to use MOOCs	Perceived Usefulness, Attitude	Perceived Usefulness, Perceived Ease of Use, TTF, Attitude, BI	Quantitative online survey	Wu and Chen (2017)

From Table 1 and 2 it is seen that the TAM and ECM are important models on E-learning and MOOCs. From the Tables 2 it is that Hsu et al (2018) conducted study on competing platforms of E-learning and MOOCs using TAM.

Information Quality, Perceived Ease of Use, Perceived Usefulness, Attitude, and Behavioral Intention

The relation of perceived usefulness, perceived ease of use, and attitude are the essence of TAM (Hu et al., 2022; Raza et al., 2020; Widiantoro & Harnadi, 2019; Prasetya & Harnadi, 2019; Wu & Chen, 2017; Khaled et. Al, 2015). Wu & Chen (2017) define perceived usefulness as the extent to which and individual perceives that MOOCs and e-learning can be a driving force towards attaining learning objectives. They also define perceived ease of use as the extent to which an individual perceives that using learning systems are free of effort. Attitude also defines by Wu & Chen (2017) as the degree to which an individual perceives a positive or negative feeling related to learning systems. Adapt to the study conducted by Harnadi (2017), behavioral intention can be defined as the extent to which a person intends to continue to use learning systems in the future.

On the studies conducted by Widiantoro & Harnadi (2019), Hsu, Chen, & Ting, 2018, and Wu & Chen (2017), perceived ease of use has positive direct effect on perceived usefulness. Perceived ease of use also has positive direct effect on attitude (Hu et al., 2022; Raza et.al., 2021; Widiantoro & Harnadi, 2019; Hsu, Chen, & Ting, 2018). Other studies conducted by Hu et al. (2022), Raza et al. (2021), Hsu, Chen, & Ting (2018), Wu & Chen (2017), and Khaled et. al (2015) stated that perceived usefulness has positive direct effect on attitude.

Furthermore, perceived usefulness, perceived ease of use, and attitude have positive direct effect on behavioral intention to use learning systems (Raza et al., 2021; Dai et.al., 2020; Widiantoro & Harnadi, 2019; Wu & Chen, 2017; Khaled et al., 2015). Perceived usefulness has direct effect on behavioral intention to use learning systems (Lee et al., 2023; Rekha et al., 2023; Raza et al., 2021; Al-Adwan, 2020; Khaled et al., 2015). Perceived ease of use has direct effect on behavioral intention to use learning systems (Raza et al., 2021; Khaled et al., 2015). Furthermore, attitude is prominent variable on TAM and it is a significant determinant on behavioral intention in using learning systems (Dai et.al., 2020; Widiantoro & Harnadi, 2019; Hsu, Chen, & Ting, 2018; Wu & Chen, 2017).

Information Quality is significant factor on study of e-learning systems. Information and system quality are a prominent variables of information system quality (Lee et al., 2023). Mulhem et al. (2020) and Alharthi et al. (2017) conducted research on e-learning quality and stated that Information Quality has positive direct effect on Perceived ease of use. Information Quality has also positive direct effect on Perceived usefulness (Mulhem et al., 2020).

According to these reviews, authors propose the hypotheses:

H1: Information Quality has positive direct effect on Perceived ease of use

H2: Information Quality has positive direct effect on Perceived usefulness

H3: Perceived ease of use has positive direct effect on Perceived usefulness

H4: Perceived ease of use has positive direct effect on Attitude

H5: Perceived usefulness has positive direct effect on Attitude

H6: Attitude has positive direct effect on Behavioral Intention

H7: Perceived usefulness has positive direct effect on Behavioral Intention

Perceived Usefulness, Confirmation, Satisfaction, and Behavioral Intention

ECM is interesting model on user adoption of learning system. Several researchers conducted study in this context using ECM model (Harnadi et.al, 2022b; Prasetya et al., 2022, Prasetya et al., 2021; Hadji & Degoulet, 2016; Kumar & Natarajan, 2020; Alam et al., 2022; Shiau et al., 2020). The studies on the user acceptance to use learning systems (Lee et al., 2023; Rekha et al., 2023; Harnadi et.al, 2022b; Prasetya et al., 2022, Prasetya et al., 2021; Prasetya et al., 2019; Hadji & Degoulet, 2016; Kumar & Natarajan, 2020; Alam et al., 2022; Shiau et al., 2020) state that confirmation has positive direct effect on satisfaction. Confirmation also has positive direct effect on perceived usefulness (Rekha et al., 2023; Shiau et al., 2020; Harnadi et al. 2022b). Furthermore, perceived usefulness has positive direct effect on Satisfaction (Lee et al., 2023; Rekha et al., 2023; Prasetya et al., 2021; Hadji & Degoulet, 2016; Kumar & Natarajan, 2020; Alam et al., 2022; Shiau et al., 2020) and satisfaction has positive direct effect on behavioral intention (Lee et al., 2023; Rekha et al., 2023; Harnadi et.al., 2022b; Prasetya et al., 2022; Prasetya et al., 2021; Prasetya et al., 2019; Hadji & Degoulet, 2016; Kumar & Natarajan, 2020; Alam et al., 2022).

According to these reviews, authors propose the hypotheses:

H8: Confirmation has positive direct effect on Perceived usefulness

H9: Perceived usefulness has positive direct effect on Satisfaction

H10: Confirmation has positive direct effect on Satisfaction

H11: Satisfaction has positive direct effect on Behavioral Intention

Self-efficacy, Perceived Ease of Use, Confirmation, and Satisfaction

Harnadi et al. (2022a) and Prasetya et al. (2021) define self-efficacy as the individual's believe in their ability to access academic content of learning systems. Self-efficacy is the prominent variable on the study of user intention to use learning systems. Self-efficacy has positive direct effect on perceived ease of use (Alassafi, 2022; Al-Adwan, 2020). According to Harnadi et.al. (2022a) and Prasetya et al. (2021), self-efficacy also has positive direct effect on satisfaction. Other researchers (Shiau et al., 2020); Shiau et al. (2020); Harnadi et al. (2020b) also stated that self-efficacy also has positive direct effect on confirmation.

According to these reviews, authors propose the hypotheses:

H12: Self-efficacy has positive direct effect on Perceived Ease of use

H13: Self-efficacy has positive direct effect on Confirmation

H14: Self-efficacy has positive direct effect on Satisfaction

This study proposes theoretical model on Figure 1 based on the review of several related literatures.

Figure 1. Proposed Theoretical Model

3. Methodology

This study employs TAM and ECM to reveal the behavioral differences of users in using MOOCs and E-learning. Previous related studies in the technology acceptance especially on MOOCs and E-Learning are reviewed to obtain salient variables and propose hypotheses and model to investigate the behavioral differences towards in using these two learning technologies. The online questionnaires were distributed to MOOCs and e-learning users in Indonesia. The questionnaires were tested first to nine students to get some improvement suggestion. Respondents from high school and university students, employers, and

entrepreneurs participated in the study. There are 749 questionnaires collected and 43 of them are dropped for reason of incomplete answers and outliers. Finally, the 706 questionnaires are used as sample data to examine the proposed hypotheses and models. ==The response rate of collecting data was 94.26% and highly acceptable (Amin, 2022)==. Firstly, the sample data must pass the internal consistency, reliability, and convergent validity tests on all constructs and items in the model. This process is conducted to ensure the properness of the sample data to be used in the structural model and hypotheses testing. The testing of the model and hypotheses has resulted in the accepting or not the hypotheses. Furthermore, multi-group analysis for MOOCs and E-learning is conducted to examine the difference of acceptance of these two learning technologies. This analysis can reveal the behavioral differences of users in using the technologies and serve the theoretical and practical implication. In addition, the practical implication can be detailed for every significant indicator in the model with IPMA analysis to serve useful insights for learning managers, teachers, and government who have concern in improvement of learning and education in their institutions.

4. Findings and Discussion,

The finding on respondent's characteristic is presented on Table 3. There are age, gender, education, status, technology used, and user experience in using learning technology. The respondents on Table 3 represent the characteristic of: most of them are student (92.8%) and university student (83.4%); half of them (54.1%) are female, almost half of them (43.1%) are MOOCs users, and half of them (51.8%) have experienced in using learning system for at least one year.

Table 3. Profile of Respondents

Age			Gender			Education		
Age	Frequency	%	Gender	Frequency	%	Education	Frequency	%

Structural Model and Hypotheses Testing

The result of structural model and hypotheses testing is presented on Table 6. The structural model and hypotheses are reviewed using several indicators including β, T value, VIF, R^2, R^2 Adjusted, Q^2, and f^2 values.

Table 6. Structural Model and Hypotheses Testing

Relationship	β	T value	VIF	R^2	R^2 Adjusted	Q^2	f^2
InfQty -> PEOU	0.394	10.400**	1.766	0.605	0.604	0.453	0.223

Sat -> BI	0.284	6.100**	3.504				0.063

Note(s): n = 1,000 subsample; **p value < 0.01, *p value < 0.05 (one-tailed test)

According to Sarstedt et.al (2021), VIF values are above 3 indicate of collinearity among variables. Table 6 shows most of VIF values are below 3, except for the regression of attitude and behavioral intention (3,219) and satisfaction and behavioral intention (3,504). However, the two VIF values are very close to 3, it is concluded that the collinearity among these variables is not critical issue in the structural model. This is in accordance with Sarstedt et.al (2021).

The f2 is the effect size value of each path model. The value has the criteria of: low for 0.02 and above, medium for 0.15 and above, and large for 0.35 and above. (Hair et al., 2018; Cohen, 1988). Meanwhile, According to Hair et al. (2019), Q2 the value at 0, 0.25, and 0.50 express the small, medium, and huge predictive relevance of the path model. Q2 values on Table 4 stated that the path model has a huge predictive relevance.

Furthermore, based on Table 6, the final model for this study is presented on Figure 1. All of hypotheses on the model are accepted. Information quality has positive direct effect on perceived ease of use

(β=0.394, p<0.001) and perceived usefulness (β=0,292, p<0.001). These results indicate that H1 and H2 are accepted. Perceived ease of use has positive direct effect on perceived usefulness (β=0.476, p<0.001) and attitude (β=0.488, p<0.001). Therefore, H3 and H4 are accepted. Perceived usefulness has positive direct effect on attitude (β=0.384, p<0.001), behavioral intention (β=0.139, p<0.05), confirmation (β=0.478, p<0.001), and satisfaction (β=0.188, p<0.001) indicating H5, H7, H8, and H9 are accepted. Attitude has direct effect on behavioral intention (β=0.432, p<0.001), therefore H6 is accepted. Furthermore, confirmation has positive direct effect on satisfaction (β=0.515, p<0.001) and satisfaction also has direct effect on behavioral intention (β=0.285, p<0.001). This result indicates that H10 and H11 are accepted. Finally, self-efficacy has direct effect on perceived ease of use (β=0.459, p<0.001), confirmation (β=0.351, p<0.001), and satisfaction (β=0.276, p<0.001). These results indicate that H12, H13, and H14 are accepted. Figure 2 presents the final model.

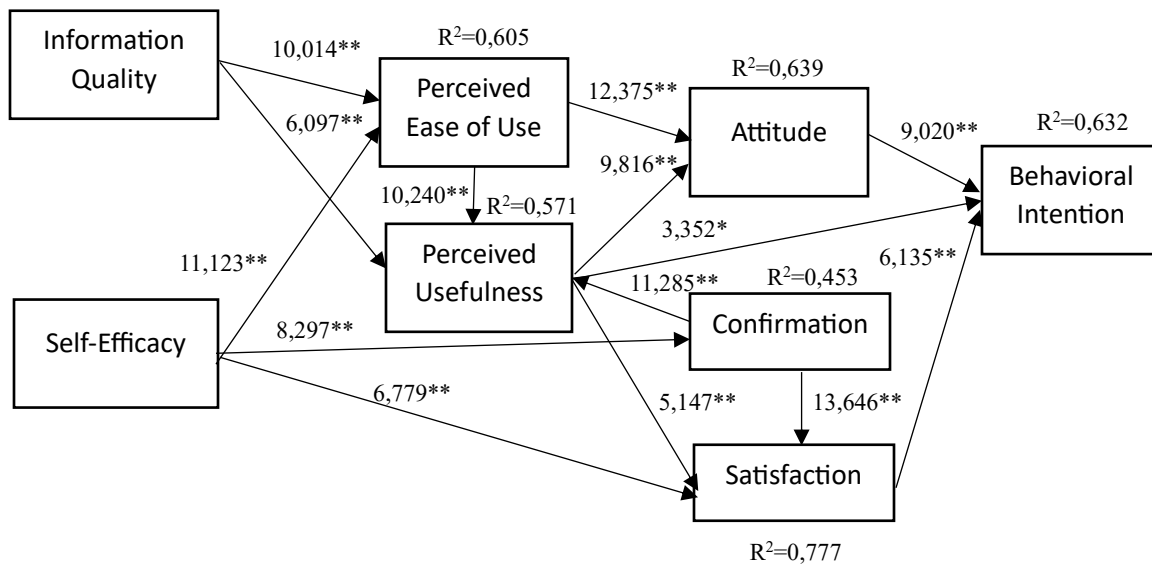

Figure 2. Final model

Multi Group Analysis

According to Cheah et al. (2020), multi-group analysis (MGA) is conducted to reveal the heterogeneity on user behavior. Multi-group analysis in this study is employed to analyze the difference of MOOCs and e-learning users in any correlation on the model and the result presents on Table 7. There are the discernible differences (mean values of MOOCs > e-learning) in the correlation between information quality and perceived usefulness, perceived usefulness and attitude, and attitude and behavioral intention. Other result, the correlation of confirmation and satisfaction has also discernible differences with the mean values of e-learning > MOOCs).

Table 7. Multi-group analysis for MOOCs and E-learning

Relationship	ρ-value	Difference value (MOOCs – E-learning)

Structural Model and Hypotheses Testing for MOOCs and E-learning

This study separates the sample data into two user categories, MOOCs and e-learning users and each of them are analyzed using the structural model and hypotheses testing (Table 8). All hypotheses on the MOOCs model are accepted. All hypotheses on the e-learning model are accepted excluding hypothesis H2, self-efficacy has no significant direct effect on perceived usefulness.

Table 8. Structural Model and Hypotheses Testing for MOOCs and E-learning

The final model of E-learning model is presented on Figure 4.

Figure 4. Final Model (E-learning)

Importance-Performance Analysis

According to Ringle (2016), importance-performance matrix analysis (IPMA) of the model can suggest interesting insights into the role of indicators of construct and their relevance for managerial implications (Ringle, 2016). The result of importance-performance analysis presents on Table 9. The construct Att2 is more important and has higher performance than Att1 and Att3. The construct Conf3 is more important and has higher performance than conf1 and conf2. The construct PEOU3 is more important than PEOU1 and PEOU2 and PEOU2 have higher performance than PEOU1 and PEOU3. Furthermore, the construct InfQuality1 is more important than InfQuality2 and InfQuality3 and InfQuality2 has higher performance than InfQuality1 and InfQuality3. The construct PU2 is more important than PU1 and PU3 and PU3 has higher performance than PU1 and PU2. The construct SE3 is more important and has higher performance than SE1 and SE2. The last, the construct Sat1 and Sat2 are more important than Sat3 and Sat2 has higher performance than Sat1 and Sat3.

5. Conclusions

This study reveals the behavioral differences in the acceptance of MOOCs and e-learning. The questionnaires from MOOCs and e-learning users are used to test the proposed model. The proposed model employs fourteen hypotheses and the results on the final model reveal all hypotheses all accepted. The separate analyses on MOOCs and e-learning acceptances and multi-group analysis on the correlation between constructs reveal the difference and no behavioral differences in using MOOCs and e-learning technology. The other interesting results come from the importance performance matrix analysis (IPMA) of the indicators on the model and their relevance for managerial implications.

The theoretical implication of this study is derived from the final model on accepted and no accepted the hypotheses. Firstly, from the findings and discussion section, this study concludes that TAM and ECM can be employed together to predict the acceptance of MOOCs and e-learning in one proposed model. On the TAM stage, perceived usefulness, perceived ease of use, attitude, and behavioral intention is proven the prominent variables on the learning technology, MOOCs, and e-learning acceptances. ECM stage on the final model also has same results, perceived useful, confirmation, satisfaction, and behavioral intention is proven the prominent variables. The effect of self-efficacy on TAM and ECM is presented on the significantly effect of self-efficacy on perceived ease of use, confirmation, and satisfaction.

Meanwhile the effect of information quality on perceived ease of use and perceived usefulness is significant for learning technology acceptance (the mix of MOOCs and e-learning), but it has different results on the analyses of MOOCs and e-learning acceptances. The difference of effect is on the significant effect of information quality on perceived usefulness in the MOOCs model and no significant effect on e-learning model. MGA also reveal that the correlation of between information quality and perceived usefulness, perceived usefulness and attitude, confirmation and satisfaction, and attitude and behavioral intention have significant difference results. The correlations of information quality and perceived usefulness, perceived usefulness and attitude, and attitude and behavioral intention have differences in the mean values of MOOCs and they are greater than e-learning. For the correlation of confirmation and satisfaction, the mean value of MOOCs is lower than e-learning.

The practical implications of this study are insights for education institutions as which provide the system to students or users, MOOCs and e-learning developers, teachers and mentors, and others who have concern in gaining MOOCs and e-learning acceptance. Firstly, the result of IPMA on the indicators construct of the model stated that the relevancy to user's needs of the information available on the online learning systems is more important than their easy access and their relevancy with current trends. In the context of performance, the easy access of information is higher than their relevancy to user's need and current trends. The result indicates that teachers and mentors must serve students with the information that relevant to their need and ascertain the information that are ease to access. Secondly, it is more important to make users feel confident in accessing academic content of learning systems than other belief. Thirdly, the feeling of users in clear and easy use of their interaction with the online system is more important than their experience in easily use or become proficient in using online system. On the other hand, becoming proficient in using online system has higher performance than having clear and easy interaction or just feel easy. It indicates that learning system developers must serve users with clear and easy interaction with the system and teachers and mentors must train users to make them proficient with the system. Fourthly, increasing user's work/study effectiveness as a result of using online learning system is more important than improving their work/study performance or helping them in turning the academic material into knowledge. Furthermore, user's feeling in no difficulty of understanding the academic material and turning it into knowledge has higher performance than increasing user's work/study effectiveness or improving their work/study performance. This result indicates that learning system developers must enhance the system to gain user's work/study effectiveness as outcome in using the system. Teachers and mentors also can serve the users with the good learning material to help them in turning the learning material into knowledge. Fifthly, how to transfer beliefs that using online learning system is a good idea for user's study/work is important This result indicates that online learning developers and teachers and mentors must serve users with many things to evoke positive attitude regarding their experience in using online learning system. Sixthly, the final confirmation of users in their experience in using online learning systems is interesting. The confirmation about their most expectation in using online learning service has been confirmed that it is more important than just their expectations or more. This result indicates that online learning developers and teachers and mentors must know the most expectation and it is confirmed by users or not. Seventhly, it is important to satisfy the users in using online learning system. The feeling on their decision to use the online learning system is the right thing, and it is more important and has higher performance than just they satisfy. This result indicates that online learning developers and teachers and mentors must keep user's decision to use the system by setting the system menu and service better.

Questionnaires

InfQty1: The information available on online learning system (MOOC or E-learning) is relevant to my needs.
InfQty2: The information available on online learning system (MOOC or E-learning) is easy to access

InfQty3: The information available on online learning system (MOOC or E-learning) is relevant to current trends in online learning

Conf1: This online learning service on MOOC or E-learning met my expectations

Conf2: My experience using online learning system (MOOC or E-learning) was more than I expected

Conf3: Overall, most of my expectations in using the online learning service on MOOC or E-learning has been confirmed.

Sat1: My experience using the online learning system (MOOC or E-learning) was quite satisfying

Sat2: I feel my decision to use the online learning system (MOOC or E-learning) was the right thing.

Sat3: Overall, I am satisfied with the use of online learning system (MOOC or E-learning)

PU1: I believe the use of online learning system (MOOC or E-learning) improve my study/work performance.

PU2: Using the online learning system (MOOC or E-learning) increases my study/work effectiveness.

PU3: By using the online learning system (MOOC or E-learning), I have no difficulty understanding the material and turning it into knowledge.

SE1: I can study using online learning system (MOOC or E-learning) even though nothing helps

SE2: I can learn using online learning system (MOOC or E-learning) just by using online help as a reference

SE3: I am quite confident in my ability to learn using online learning system (MOOC or E-learning)

Att1: Using online learning system (MOOC or E-learning) is a good thing

Att2: I believe that using online learning system (MOOC or E-learning) is a good idea for my studies/work.

Att3: I like understanding/expertise about many things on the online learning system (MOOC or E-learning)

PEOU1: Learning to use online learning system (MOOC or E-learning) is easy.

PEOU2: It is very easy to become proficient using online learning system (MOOC or E-learning)

PEOU3: Interaction with the online learning system (MOOC or E-learning) feels clear and easy to understand

BI1: I intend to continue using the online learning system (MOOC or E-learning) in the future, at least for now.

BI2: I intend to continue using the online learning system (MOOC or E-learning) in the future.

BI3: I will use the online learning system (MOOC or E-learning) in the future.

Manuscript Number: **CHBR-D-23-00439R1**

Investigating the Behavioral Differences in the Acceptance of MOOCs and E-learning Technology

Dear Mr. Harnadi,

Thank you for submitting your manuscript to Computers in Human Behavior Reports.

I am pleased to inform you that your manuscript has been accepted for publication.

My comments, and any reviewer comments, are below.

Your accepted manuscript will now be transferred to our production department. We will create a proof which you will be asked to check, and you will also be asked to complete a number of online forms required for publication. If we need additional information from you during the production process, we will contact you directly.

We appreciate you submitting your manuscript to Computers in Human Behavior Reports and hope you will consider us again for future submissions.

We encourage authors of original research papers to share the research objects – including raw data, methods, protocols, software, hardware and other outputs – associated with their paper. More information on how our open access Research Elements journals can help you do this is available at https://www.elsevier.com/authors/tools-and-resources/research-elements-journals?dgcid=ec_em_research_elements_email.

Kind regards,
Dorin Stanciu, Ph.D.
Editor-in-Chief
Computers in Human Behavior Reports

Editor and Reviewer comments:

Reviewer's Responses to Questions

Note: In order to effectively convey your recommendations for improvement to the author(s), and help editors make well-informed and efficient decisions, we ask you to answer the following specific questions about the manuscript and provide additional suggestions where appropriate.

1. Are the objectives and the rationale of the study clearly stated?

Please provide suggestions to the author(s) on how to improve the clarity of the objectives and rationale of the study. Please number each suggestion so that author(s) can more easily respond.

Reviewer #1: Yes.

Reviewer #2: Yes.

2. If applicable, is the application/theory/method/study reported in sufficient detail to allow for its replicability and/or reproducibility?

Please provide suggestions to the author(s) on how to improve the replicability/reproducibility of their study. Please number each suggestion so that the author(s) can more easily respond.

Reviewer #1: Mark as appropriate with an X:
Yes [X] No [] N/A []
Provide further comments here:
The revised manuscript has explained the theories used in this study.

Reviewer #2: Mark as appropriate with an X:
Yes [X] No [] N/A []
Provide further comments here:

3. If applicable, are statistical analyses, controls, sampling mechanism, and statistical reporting (e.g., P-values, CIs, effect sizes) appropriate and well described?

Please clearly indicate if the manuscript requires additional peer review by a statistician. Kindly provide suggestions to the author(s) on how to improve the statistical analyses, controls, sampling mechanism, or statistical reporting. Please number each suggestion so that the author(s) can more easily respond.

Reviewer #1: Mark as appropriate with an X:
Yes [X] No [] N/A []
Provide further comments here:

Reviewer #2: Mark as appropriate with an X:
Yes [] No [X] N/A []
Provide further comments here:
Please check percentage in first paragraph, page 13 with Table 1. I think it's contradicted.

4. Could the manuscript benefit from additional tables or figures, or from improving or removing (some of the) existing ones?

Please provide specific suggestions for improvements, removals, or additions of figures or tables. Please number each suggestion so that author(s) can more easily respond.

Reviewer #1: No.

Reviewer #2: No.

5. If applicable, are the interpretation of results and study conclusions supported by the data?

Please provide suggestions (if needed) to the author(s) on how to improve, tone down, or expand the study interpretations/conclusions. Please number each suggestion so that the author(s) can more easily respond.

Reviewer #1: Mark as appropriate with an X:
Yes [X] No [] N/A []
Provide further comments here:

Reviewer #2: Mark as appropriate with an X:
Yes [X] No [] N/A []
Provide further comments here:

---

6. Have the authors clearly emphasized the strengths of their study/theory/methods/argument?

Please provide suggestions to the author(s) on how to better emphasize the strengths of their study. Please number each suggestion so that the author(s) can more easily respond.

Reviewer #1: Yes.

Reviewer #2: Yes.

---

7. Have the authors clearly stated the limitations of their study/theory/methods/argument?

Please list the limitations that the author(s) need to add or emphasize. Please number each limitation so that author(s) can more easily respond.

Reviewer #1: Yes.

Reviewer #2: Yes.

---

8. Does the manuscript structure, flow or writing need improving (e.g., the addition of subheadings, shortening of text, reorganization of sections, or moving details from one section to another)?

Please provide suggestions to the author(s) on how to improve the manuscript structure and flow. Please number each suggestion so that author(s) can more easily respond.

Reviewer #1: This manuscript is satisfying in its structural development and writing.

Reviewer #2: The manuscript can benefit from proofreading service for the writing.

---

9. Could the manuscript benefit from language editing?

Reviewer #1: No

Reviewer #2: Yes

Reviewer #1: This field is optional. If you have any additional suggestions beyond those relevant to the questions above, please number and list them here.

Reviewer #2: This field is optional. If you have any additional suggestions beyond those relevant to the questions above, please number and list them here.

At Elsevier, we want to help all our authors to stay safe when publishing. Please be aware of fraudulent messages requesting money in return for the publication of your paper. If you are publishing open access with Elsevier, bear in mind that we will never request payment before the paper has been accepted. We have prepared some guidelines (https://www.elsevier.com/connect/authors-update/seven-top-tips-on-stopping-apc-scams) that you may find helpful, including a short video on Identifying fake acceptance letters (https://www.youtube.com/watch?v=o5l8thD9XtE). Please remember that you can contact Elsevier s Researcher Support team (https://service.elsevier.com/app/home/supporthub/publishing/) at any time if you have questions about your manuscript, and you can log into Editorial Manager to check the status of your manuscript (https://service.elsevier.com/app/answers/detail/a_id/29155/c/10530/supporthub/publishing/kw/status/).

PLEASE DO NOT ALTER THE SUBJECT LINE OF THIS E-MAIL ON REPLY

Dear Mr. Bernardinus Harnadi,

Thank you for publishing with Computers in Human Behavior Reports. We are pleased to inform you that the proof for your upcoming publication is ready for review via the link below. You will find instructions on the start page on how to make corrections directly on-screen or through PDF.

https://elsevier.proofcentral.com/en-us/landing-page.html?token=1050233e10ac3600a330933447611d

Please open this hyperlink using one of the following browser versions:

- Google Chrome 68+
- Mozilla Firefox 61+
- Mac OS Safari 11+
- Microsoft Edge 79+

We ask you to check that you are satisfied with the accuracy of the copy-editing, and with the completeness and correctness of the text, tables and figures. To assist you with this, copy-editing changes have been highlighted.

You can save and return to your article at any time during the correction process. Once you make corrections and hit the SUBMIT button you can no longer make further corrections.

Please review the proof and submit any corrections within 48 hours to help us publish your article as quickly and accurately as possible.

We very much look forward to your response.

Yours sincerely,

Elsevier
